

Using a Closed-System Protective Device to Reduce Personnel Exposure to Antineoplastic Agents

Documenting environmental and personnel contamination in the pharmacy.

Speaker:

Jim Jorgenson, RPh
Director of Pharmacy Services
University of Utah,
Hospital and Clinics

Discussion topics include:

- Evolution of safe practice in handling cytotoxic agents
- Prevalence and significance of chemotherapy exposure
- Description of a closed-loop system for safe handling
- Comparison of closed system to traditional methodologies

Join us for a complimentary continental breakfast to discuss the evolution of safety precautions for handling cancer chemotherapy drugs and studies performed at the University of Utah on the use of a closed-loop system for preparing and administering antineoplastics.
