Allen Bradley PLC Training

(Specialize in Allen Bradley SLC-500, PLC-5, ICOM and RSLogix PLC Training)

Business Industrial Network provides on site, customized program logic controller (PLC training), for your maintenance staff. This is yet another way we are responding to our customers needs. Our survey of over 100 companies and corporations reveals two well known facts.

1. The most unplanned downtime occurs during the off shifts.
2. Most companies only have PLC capable technicians available during the day shift.

Our studies on the true cost of production downtime prove that plc training of off shift employees yields a great return on your investment (ROI). We have also found those who have had plc training previously, greatly benefit from our customized training. Maintenance technicians give two good reasons for receiving additional training from Business Industrial Network.

1. "I took an OEM course a few years back, but they went too fast, and taught topics I have never used."
2. "When you hardly ever have to troubleshoot a plc, you forget that class room stuff."

What sets us apart from your other training options.

- We review and use the actual plc programs you use in your facility.
- We customize the topics, material, and level of expertise to match your current maintenance personnel's needs.
- We deliver the training in your facility, during the shifts that you request.
- We start with classroom training, software simulations, and hand outs that reflect your actual facility equipment.
- We wrap up the world class training with a quiz to assess effectiveness.
- We then move out into the facility for hands on training using your PCs, software and equipment.
- We follow up with a plan to backup all plc programs in your facility.
- We leave you with a copy of presentation for reviews and in house training of future employees.
- One hourly rate, no overtime/weekend charges.
- No travel expense charges for St. Louis to Sikeston customers.

Our goal is to give your maintenance personnel the training they need to troubleshoot and maintain the equipment in your facility. Our training ranges from the basics the beginner, to advanced training to aid your current technicians in working with new assets and technologies.
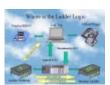

Business Industrial Network recommends that at least 1 person on each shift be competent in the following areas.

- Safety
- Basic use of your icom / rslogix software
- Understanding ladder logic usage
- Sound practices with Winzip, file management, downloading and EPROM's
- Set up and PC to PLC Communications
- View program On line and Off line
- Trouble shoot actual problems
- Familiar with Programming Conventions used in your equipment
