The Global Learning System (GLS) can help your organization achieve the following benefits:

- ✓ **Reduce training costs – develop and deliver training material to multiple regions without incurring travel costs**
- ✓ **Increase training consistency – present material in a concise and consistent manner every time**
- ✓ **Stimulate trainee learning – incorporate compelling multi-media content, e.g., PowerPoint, audio, and video**
- ✓ **Measure training results – provide comprehension tests and record results**
- ✓ **Training on demand – accessible anytime, anywhere**

The GLS is a robust Learning Management System that enables companies and educational institutions to create and deliver learning online. The GLS is a flexible application that can accommodate a multitude of curricula (learning paths) and deliver the appropriate curriculum to each unique learner (determined by learner's login).

The GLS is a complete, scalable e-learning solution -- equally suited to companies just beginning their foray into e-learning as well as those that are firmly entrenched in e-learning. Whether your intention is simply to put manuals online or to deliver media-rich curricula (video, audio, web conferences) the GLS will meet your needs. This product was designed to be intuitive to both novice learners (the notebook feature allows creation of paper based notes) and the experienced e-learner who may wish to take advantage of a non-linear approach to learning.

For Learners:

- **Visual Learning Path** – provides an intuitive course outline to follow.
- **Online Messenger** – facilitates communication with manager, teacher and other learners.
- **Notebook assistant** – enables new online learners to save information in a more traditional, printable format.
- **Progress Report** – empowers learners to continually assess their advancement.
- **Digital Certificate** – is awarded to learners upon successful completion of course.

For Course Administrators:

- Brand the GLS by customizing the learner interface with your company's logo
- Set up unlimited number of learners and courses with no additional cost.
- Generate comprehensive reports on all users and courses in the system.
- Create courses on the fly, with no experience in course development – the system walks you through the steps.
- Interact with employees or learners through the Online Messenger system and web board.
