

Protect your email from viruses.

Mail Server Anti-Virus Protection

A complete virus defense system designed for easy and dependable mail server virus prevention on the PowerElf II server appliance. The Anti-virus software will also perform a nightly file scan of all the files on the PowerElf II server.

Key Feature of the Anti-virus software

- Virus detection and quarantine.
- Scans all in-bound and out-bound email.
- Real time virus interceptions.
- Can process high volumes of email.
- heuristic virus detection.
- Fully automatic update of scan engine and definitions.
- Supports virus scanning within archives (ZIP, AR, LHA, ARJ, etc...)
- Detection of malformed messages.
- configurable warning notifications to sender, recipient and postmaster.

The Vexira Advantage:

- Vexira Anti-virus utilizes a high-performance file analysis technology. This technology accurately identifies which files may contain malicious code requiring further investigation, and those files which do not, a process that greatly increases virus-scanning speed.
- Vexira Antivirus is updated on a weekly basis and daily (as needed) to supply you with a superior level of protection. New viruses are analyzed daily and Central Command's response times are among the quickest in the world.
- Vexira Antivirus includes in-depth virus analysis technology not only to detect those active viruses but also those infections stored or hidden in backups, Internet e-mail, or archives
