AVAILABLE NOW**

Always on Protection for the Always on Connection[™]

Parental Control and Internet Security for today's Broadband Family
in one complete package.

NetIntelligence Home Edition is the first all-in-one Parental Control & Security software for today's Broadband family.

Broadband has transformed the way that we use the Internet and it has opened up a whole world of exciting opportunities for our families. Yet in common with many of life's activities, the Internet is not without its perils. 'Always On' can mean 'Always Vulnerable'.

Everyday we hear stories about children being 'groomed' in chat rooms, about virus attacks, about violent computer games, and with each new report, our anxieties are justifiably heightened. Most of us are aware that the Internet can be unsafe - we just do not know how to address the issues or where to turn to for help. NetIntelligence Home Edition now provides the complete solution. Easy to install and operate, whatever your technical expertise.

NetIntelligence Home Edition is an essential tool for anyone with a broadband connection who is seeking total protection for their families.

What is NetIntelligence? How does it work?

NetIntelligence is considered an End Point software solution. This simply means a piece of software that physically resides on a device at the end of a network - in this case, on your home computer(s) at the end of your broadband connection. As the software is actually installed on your computer, it is ideally placed to act as a 'guardian' for you - monitoring harmful activity, taking appropriate actions and then reporting back to you.

Some of the 'rules' that NetIntelligence will follow, are predetermined by us - what to do when a virus is detected for example - but most of them are set by you, via your online Control Centre. A 'rule' might be as simple as allowing your daughter access to a particular web site or preventing your son from visiting one! In order to determine whether you have made any changes to these 'rules', the software constantly communicates with NetIntelligence HQ. The software is programmed to 'talk' to our databases at least once a minute when you are using your broadband connection. As well as receiving its new instructions, NetIntelligence will also report back on the activities it has been asked to monitor - and it does this via a comprehensive set of reports which are made available to you online.

This unique process ensures that you are constantly protected - in real time!

> Features

• Instant Messenger/Chat Monitoring

Detailed analysis of all instant messenger/chat sessions. Date, time, length, the people involved and the actual transcripts of the 'conversations' that took place.

• Harmful Web Site Blocking

You determine which types of web sites you do, and do not, want your family to visit. You can use NetIntelligence's default categories and your own personal/custom lists. Lists can be tailored for particular family members. You can even create a totally secure 'Safe Internet environment' by only allowing access to web sites that you consider as both safe and appropriate.

• Blocked Website Attempts

Detailed view of any attempts made by members of your family to reach web sites that you have deemed harmful or inappropriate.

• Anti Virus

Through our unique partnership with Kaspersky, one of the world's leading Anti Virus companies,

NetIntelligence automatically provides you with the latest virus protection. No updates to download or install - we take care of it for you.

• Applications/Software Used

Detailed analysis of the top applications and software used by members of your family during their computer sessions.

• Email Protection

Email is the most typical source of virus infection. NetIntelligence checks and cures both your incoming and outgoing mail in real-time. It even scans and cleans your mail boxes. Your email is always safe!

• Multiple Household Computers - One View

NetIntelligence is perfect for households with more than one computer. You can install the software on a maximum of 3 separate computers and manage them

from anywhere using the online Control Centre. NetIntelligence will protect up to 6 unique users per computer, giving you up to 18 users in total.

• Time Spent on the Computer

Keep an eye on the length of time that each user is spending on the computer and, perhaps more importantly, when they are using it.

"At the heart of NetIntelligence lies the online Control Centre".

The NetIntelligence Online Control Centre puts you in control...

At the heart of NetIntelligence lies the online Control Centre. It is here that you can set the rules that NetIntelligence will follow, change your settings, and view your personal reports. As the Control Centre is online you can use it at any time from any Internet connected computer in the world! And as the information is refreshed every minute - you have as near to 'real time view' as is possible.

> NetIntelligence Web Blocking Categories & Criteria

Blocked Categories & Criteria

NetIntelligence has made web blocking simple. To date, the NetIntelligence Assessment Team has categorised over 30 million inappropriate web sites, files and images, held in our central NetIntelligence databases, into 6 main 'threat' categories. Using a combination of techniques and sources, the team is constantly updating the databases - 24 hours per day, 7 days per week - with the latest harmful web content, ensuring that you have the best protection possible.

The following definitions cover most, but not all, of the sub-categories which make up our six "blocked" categories. Web sites which clearly can not be "trusted" in nature, and which do not fit neatly into any of the sub categories, are automatically placed in the "Threats" category by default.

• Adult

Pornographic sites; sites featuring nudity and/or sexuality; "adult" underwear and role-playing apparel; games, humour and literature sites with overtly adult content; personals/dating/romance; art featuring nudity or explicit sexuality; sex education; erotica.

• Drugs

Sites concerned with supply, promotion and/or advocacy of illegal drugs; including drug-related paraphernalia, literature, and equipment; associated alternative lifestyles.

• Gambling

Bookmakers and casinos (online and offline); gambling machines (fruit machines, roulette, etc.); gambling resource and information sites.

• Gaming

Online games; online gaming groups; gaming resources; interactive puzzles; role-playing games; video games; coin-operated games.

• Hate

Violence; aggression; racism; weapons (supply and advocacy/information); terrorism; political, racial or religious intolerance, bigotry or hate; incitement to law-breaking, including civil disobedience; suicide assistance/advocacy sites.

• Threats

Sites concerning hacking, phreaking, phishing, virus creation, password cracking, illegal software, warez, proxies and redirectors, fraud, credit card number generation, dialers, and other identifiable threats.

The NetIntelligence Databases contain illegal web sites that have been assessed, and classified as such, by The Internet Watch Foundation (IWF).
