ONLINE ENTERPRISE MANAGEMENT

Transactional Web

Instant internet based access to critical information from your NextPOS point-of-sale.

Transactional Web reaches across your entire organization to put you in the driver's seat of your business without costly investments in hardware and software.

You will rely upon the timely, informative, and accessible financial and operational intelligence from across your locations to measure results and identify trends. Streamlined business processes will reduce your costs and make your people more productive – your business more valuable.

The hassle of software license fees, versions, upgrades, and backups is history. A simple subscription based model means you get all of the benefits and none of the overhead.

Transactional Web empowers you to spend more time on your business and less time in it with:

Access Anywhere. Anytime.

All you need is a web-browser. You and anyone you designate can have real-time access to information for one, any, or all of your locations. From a store, the office, your home, wherever. You'll always have visibility.

Streamlined Processes

If you have the data, use it. By capturing and making data comparable across locations and point-of-sale systems, you can eliminate time delays, manual data entry, and opportunities for mistakes. Save time, costs, and headaches.

Comprehensive Information

No more faxing, mailing, calling-in, and keying data into spreadsheets. TWI provides detailed location and group reporting on your browser. View your reports on-line or have them emailed directly to you every morning. Compare and contrast locations to each other or against a group.

Unlimited Scalability

Our infrastructure will support as many locations as you can open as quickly as you can open them. Point. Click. Add location. If only building the restaurant were this easy.

Transactional Web and NextPOS

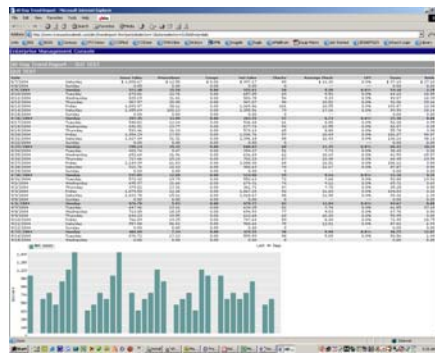

Enterprise-wide sales analysis and reporting.

Integrates with your NextPOS point-of-sale system.

Completely web-based. Zero infrastructure.

Streamlined business processes.

Scalable.

iEnterprise

Is an online system that enables you to:

- Access critical information from across locations
- Implement efficiencies across your business
- Make informed decisions based on timely intelligence
- Grow without the headaches of additional hardware or software

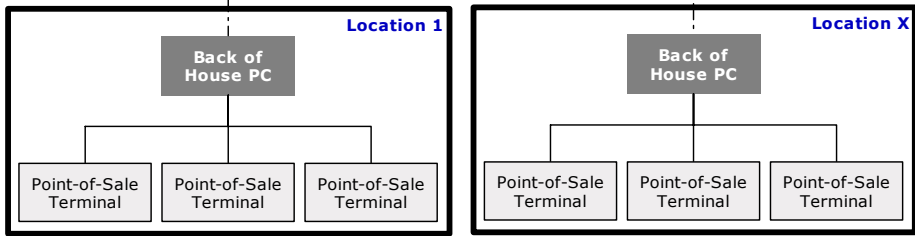

- Anytime, anywhere access with only a web browser and an Internet connection
- Multi-location visibility
- Unlimited users

iEnterprise Datacenter
Normalized data by location

- Secure managed datacenter
- Comparable information across locations
- Completely automated

- Scalable to any number of terminals and locations
- Automated data acquisition with NextPOS Data Polling Server
- Dial-up or Broadband

Data Acquisition

- The NextPOS Data Polling Server transmits data to the iEnterprise Datacenter via email over dial-up or broadband connections.
- iEnterprise's automatic loading process has built-in fault tolerant logic to monitor and eliminate potential data issues.
- The entire end-to-end process is completely automatic – straight from the point-of-sale to enterprise reporting.

Configurability

- Concept and location level settings make the system precisely fit your requirements.
- Unlimited groups and location-to-group assignments gives reporting flexibility.
- User preferences and rights control how and what information is made available to each user.
- Categories and category mapping provides ultimate flexibility and comparability in category and product mix reporting.

Online and Subscribed E-Mail Reporting

- Custom date range and location or group parameters provide complete control over report content and scope.
- Users see only what they are permitted to see based on their user rights.
- Reports can either be viewed online or subscribed and delivered automatically as formatted HTML e-mail to a user every morning.

Integration

- Integrates with accounting systems using standards-based XML and secure SSL communication protocols.
- Completely configurable accounting preferences at the location level.
- Automatically generates balanced daily journal entries and posts them into the accounting system.
