

dbQwikSite 3.5

"The Fastest Way to Bring Your Business to the Web"

Product Information

dbQwikSite is a revolutionary software for building all kinds web applications connected to databases. dbQwikSite is an intelligent code generator saving hours of tedious web programming. You can produce data driven web sites with absolutely no coding or knowledge of web database programming.

dbQwikSite is able to generate ASP or PHP active web sites which permits hosting on both Windows and Linux Servers. Alternatively it can also produce static HTML web sites using database content extraction.

dbQwikSite can produce data pages, search pages, data management pages, site security and login, on-line shopping pages, master / detail pages and more. Moreover you do not need to know ASP, PHP, SQL or Java Scripting. No "runtime" add-ins are required.

Benefits

dbQwikSite is an empowering productivity tool, greatly speeding up the process of creating web sites with data content as well a increasing quality and reducing the testing cycle. Provided templates accelerate building your site and add professional polish.

User Empowerment

dbQwikSite generates 100% of the pages and scripts needed to manage and secure an on-line database. This means that you do not need to know or code dynamic web sites using ASP or PHP. Simply design your site and publish it to your server.

Simplicity of Use

With dbQwikSite's designer and templates, even a novice can produce functional sites in no time at all. The integrated FTP function ensures that the transition between design and published site is as simple as possible.

Productivity Boosts

Even seasoned web masters will find that they can experience a many fold increase productivity. This translates to faster delivery and substantial cost savings in creating on-line database web sites.

Multi-Platform

dbQwikSite is one of the few web building tools that give you the choice of hosting platforms. dbQwikSite's ASP will run on windows servers, while PHP is supported al virtually all lower cost UNIX servers. With dbQwikSite, the choice of hosting platforms is yours.

Features

Query Builder

A unique feature of dbQwikSite is the integrated visual query builder, which integrates seamlessly into the designer, producing all the required SQL statements for you.

Data Pages

dbQwikSite generates web pages displaying the data content of your database. You can control the number of records per page, color schemes, headers, footers and more.

Searching and Navigation

dbQwikSite creates all the features you need for your visitors to navigate and search your on-line databases. You can choose from different navigation styles and design search pages with subsets of database fields. Wild card searching and advance searching is automatically generated for you.

Templates

dbQwikStart templates are preconfigured projects including sample databases and page definitions, layouts, headers that are working web sites for different businesses. You can use as a starting point for your business or run straight out of the box.

You can choose from a rich set of provided, professionally designed record layouts to give your site a professional look. Advanced user can even design their own layouts and add them into dbQwikSite.

On-Line Data Management

dbQwikSite is more than a database publisher, it actually generates web pages to add, edit, and delete records on your server. This means that your server data can be managed from any web browser.

Data Security

dbQwikSite allows you create a login page and selectively secure other pages. This means you can control which parts of your site visitors can access. The multilevel support allows Group and Hierarchical security models. In only a few clicks to ensure that your site meets your security requirements.

Scripting

dbQwikSite is one of the very few tools in the market that produce both ASP and PHP server scripts. dbQwikSite can be equally hosted on Windows servers or UNIX servers.

Local Testing

Shorten your testing cycle. dbQwikSite generates all the code for local testing before publishing. See the site in your local browser before promoting to your on-line server.

Publishing

dbQwikSite's integrated publishing tool helps bridge the gaps between local and remote environments. A simple publisher helps ensure that code tested locally will operate on the remote server.

Multi-Database

dbQwikSite can produce web sites that use virtually any database. Using ADO and ODBC you can use dbQwikSite with MS Access, MySQL, MS SQL, foxpro, Oracle, and dozens of other databases.

E-Commerce

dbQwikSite E-Commerce edition features integrated shopping cart and check out pages. You can create on-line stores with ease.

The Fastest Way to Bring Your Data to the Web
