Easy real-time web reports!

dbQwikReport 1.0

"Web Reports Made Simple"

Product Information

dbQwikReport is a program for creating database reports viewable in your web browser. dbQwikReport is a report designer and intelligent code generator, saving hours of tedious web programming. You can produce real-time reports for your web site with absolutely no coding or knowledge of web database programming.

dbQwikReport reports can be generated in either ASP or PHP web scripts. Your reports can be hosted on either Windows or Linux servers. Since the generated code is "pure" script, there is no special software to install on your server, nor any expensive server reporting licenses to buy.

dbQwikReport can produce reports with filtering, sorts, grouping, totals, average, export data to your PC and more. dbQwikReport has advanced features found only in much more expensive "corporate" reporting solutions. Such as: the ability to secure reports with multilevel logins, ability to filter data by logged in user, report run submission parameters and localization support,

Benefits

dbQwikReport provides you with a **low cost** means to create highly accessible and highly portable business reports. You can create reports that run on your server viewable to anyone, anywhere, anytime while maintaining security and privacy.

Business Empowerment

Web based reporting means that your reports are available to everyone: web site visitors, customers, mobile workers, intranet office workers and executives on the move. Highly accessible, tailored, timely and concise real time reports give people the information they need when they need it.

Simple to Author

With dbQwikReport's designer, even a novice can produce web enabled reports in no time at all. A report wizard steps you through the process of designing a reports. Auto layout mean that you spend less time aligning and trying to get things lined up.

Simple to Run

Simple to host: there is no special software needed on your web server. Host on either windows or Unix (Linux) web servers. Unlike may reporting solutions you do not require .NET on your server or on your PC to view the reports. View reports in any standard web browser, no add-ins no client side software.

Secure

Integrated security ensures that only authorized people have access to reports. You can define up to 9 security levels. dbQwikReport has a unique security feature allowing reports to filter data that belongs to the logged in user, creating personalized, private reports.

Economical

Most reporting solutions are based on expensive server "reporting engines" costing thousands of dollars. Many require .NET servers. Others require licenses to view reports. With dbQwikReport, you pay only for the program to design reports. There are no limits on number of reports produced, number of domains to host, number of users that can view reports. There are no special licenses required on the server or on the end user's browser.

The Company

TheDevShop Ltd. is a software company producing custom software solutions and productivity tools for technical users.

The DevShop Ltd.

Features

Query Builder

A unique feature of dbQwikReport is the integrated visual query builder, which integrates seamlessly into the designer, producing complex SQL statements for you. You design a query by simply connecting tables and checking the desired record fields.

Report Designer

Reports are automatically laid out for you. You can format data, add and remove fields, change colors, create color themes, reorder columns and more using the reports designer.

Grouping

You can create up to 5 levels of data grouping for data presentation and data calculations. Totals are calculated for each grouping level.

Sorting

Add sorts to your report by simply picking the fields to sort on and arranging them in the order that you want your sorts performed.

Calculating

Summarizing data couldn't be easier. You can add Sum (totals), Averages, Min/Max data values, and record counts by simply checking a box in a Field / Calculation matrx.

Data Security

dbQwikReport allows you create a login page to secure your report. This means you can control which parts of your site visitors can access. The multilevel support allows Group and Hierarchical security models. In only a few clicks to ensure that your site meets your security requirements. You can even limit the data in the report to the logged in user.

Scripting

dbQwikReport is one of the very few tools in the market that produce both ASP <u>and</u> PHP server scripts. dbQwikReport can be equally hosted on Windows servers or UNIX servers., with <u>no special server software required</u>.

Local Testing

Shorten your testing cycle. dbQwikReport generates all the code for local testing before publishing. See your report in your local browser before promoting to your on-line server.

Publishing

dbQwikReport's integrated publishing tool helps bridge the gaps between local and remote environments. A simple publisher helps ensure that code tested locally will operate on the remote server.

Multi-Database

dbQwikReport can produce web sites that use virtually any database. Using ADO and ODBC you can use dbQwikReport with MS Access, mySQL, MS SQL, foxpro, Oracle, and dozens of other databases.

Flexible

With dbQwikReport you have a high degree of flexibility, the choice is yours. Choose, Windows or Unix web server, choose virtually any database, choose who can see reports. It is a truly flexible reporting solution.

Version Comparison

dbQwikReport is available in two commercial Editions: dbQwikReport eXpress and dbQwikReport Pro Edition.

Features	eXpress	Pro
Create reports viewable from any location in the world via the world wide web	✔	✔
Report using data in your web server databases	✔	✔
Create simple reports, nothing fancy, just list it out and add it up!	✔	✔
Sum, Average, Max, Min and Count any numeric fields	✔	✔
Sort data	✔	✔
