

# Zertificon Solutions

## Zertificon Solutions at a glance

Zertificon Solutions develops software for simplification and facilitation of security functions in electronic business processes and communications. The IT security products are designed for professional users in companies and institutions and stand out from the competition due to their comfortable and easy operation. The IT security solutions Z1 SecureMail Gateway, Z1 Backbone of Trust and Z1 FileProtector make e-mail messages, file transfer and electronic business processes automatically secure and trustworthy. Organizations of all sizes and industries can benefit from significantly reduced costs by securing their business processes and communication with

customers and business partners on the Internet with solutions of Zertificon. The core product Z1 SecureMail Gateway protects the entire e-mail traffic of an organization by employing central encryption techniques and electronic signatures. It's the leading European software with the most reference installations. Distribution and technical support is being provided by qualified and dedicated distribution partners. Based on the competence areas Secure eMail, PKI & SmartCards, Digital Signature & Encryption as well as Open-Source-Security security services as consulting, software development and system integration complete the portfolio. Zertificon Solutions employs ca. 20 people.

## Products

### Z1 SecureMail Gateway

Z1 SecureMail Gateway safeguards the complete email traffic of an organization against unidentified manipulation and unauthorized access.

Confidentiality and integrity of the entire email traffic within the company and with external communication partners are realized with that virtual admin office. Z1 SecureMail Gateway is a central e-mail security server for encryption and signature with S/MIME and PGP.

### Z1 Backbone of Trust

By centralizing PKI functionalities Z1 Backbone of Trust simplifies the Security Administrators work of managing external certificates dramatically.

It is permanently up-to-date because it sends request to certificate revocation lists and PGP servers automatically.

Z1 Backbone of Trust Even supports even mobile co-workers anytime anywhere.

### Z1 FileProtector

As encoding software Z1 FileProtector safeguards company-confidential and personal files against unidentified manipulation, unauthorized access and e-mail attachments from eavesdropping. To encode files Z1 FileProtector uses certificates, which are always up-to-date and valid - thanks to the service of Z1 Backbone of Trust.
