

Greatmail Increases Storage For Email Hosting Plans

Houston, TX (PRWEB) July 25, 2005 -- Email hosting provider Greatmail LLC announced today that it has increased the storage limits for its email hosting plans. Greatmail offers five business email hosting plans that now include 1 to 5 gigabytes of storage. Pricing ranges from \$19.95 to \$199.95 per month. Entry level Plan 1 costs \$19.95 per month and includes 1 gigabyte of total storage for up to five domains and 25 POP3 or IMAP email accounts. Advanced level Plan 5, which costs \$199.95 per month, includes 5 gigabytes of total storage and supports up to 25 domains and 500 mail accounts.

Greatmail provides enterprise class email hosting through server clustering and raid array file storage. Hosting clusters are equipped with load balanced mail servers and Network Appliance file servers. All Greatmail business plans provide a managed email hosting solution and include firewall security, server level virus scanning, user customizable spam filtering, mail forwarding, vacation messages and auto responders. Users can access their email accounts through a web based mail program or any mail client application that supports POP3 or IMAP4 connectivity and SMTP Authentication. Greatmail provides phone and email technical support and offers DNS hosting at no additional cost.

Enterprise customers can find outsourced email solutions through Greatmail's corporate email hosting plans which support up to 1,000,000 users. Through semi-dedicated or dedicated hosting clusters, Greatmail can host private label mail solutions for web hosting companies, internet service providers, resellers and large corporations. Corporate hosting plan pricing is based on the number of users, frequency of mail account activity, storage requirements and bandwidth usage.

Greatmail's servers are located at dedicated climate-controlled facilities equipped with complete power protection via on-site UPS and diesel generators, pre-action fire suppression and direct connections to the major internet backbones. 24-hour network supervision by qualified technicians and automated system monitoring ensure quick problem resolution. Greatmail's servers run the latest versions of Linux OS and are backed up daily by a server independent, non-centralized mirrored disk backup system.
