

StarForce Technologies Announces *Safe'n'Sec Business*

August 23, 2005

Announcing the commercial launch of a brand-new multiple user IPS-solution no business owner should be without: *Safe'n'Sec Business*.

SAN FRANCISCO, CA — Security leader **StarForce Technologies** (www.StarForce.com) announces the commercial launch of its brand-new multiple user IPS-solution: ***Safe'n'Sec Business***. As of today, *Safe'n'Sec Business* has been officially added to the company product range, and is available for purchasing online, at a multitude of locations including Share-it!, and other top internet software shops.

Released for PC platforms, the *Safe'n'Sec Business* family consists of two product versions: *Safe'n'Sec Business* and *Safe'n'Sec Business With Antivirus*. Thanks to the latest technological innovations implemented in the program, *Safe'n'Sec Business* is able to effectively cope with new and unknown viruses, hacker attacks, spyware utilities and unauthorized access attempts. *Safe'n'Sec Business With Antivirus*, meanwhile, features a powerful additional antivirus facility able to search for malicious code in files downloaded or stored on the PC.

Safe'n'Sec Business maintains the most important advantage of IPS-solutions: the ability to prevent malicious activity based on behavior analysis of the applications as they occur. Once an unauthorized or hazardous action attempt occurs, *Safe'n'Sec Business* warns the administrator, notifying him at once with an accurate identification and location of the potential threat. Based on the action taken by the administrator, the program not only prevents malicious activity but also logs statistics on each of the potential emergency situations, which are then saved in text files for further analysis as needed.

Safe'n'Sec Business features a central management console tool (called *Safe'n'Sec Admin Explorer*), which allows the system administrator to effectively manage the network *Safe'n'Sec* clients monitoring network security. *Safe'n'Sec Admin Explorer* is easy to use and requires no installation, and as a central management console tool, decreases the *Safe'n'Sec* installation time significantly while also helping to reduce the product maintenance costs. The program's licensing is quickly and easily put into practice through the simple entry of the product serial number.

To provide the ultimate in security, the main characteristics of *Safe'n'Sec Business* correspond to the latest requirements outlined for information security systems, including: centralized and remote management, adjustable security parameters for each workstation, and centralized and remote execution of security service tasks.

Safe'n'Sec Business is 100% compatible with all software packages used on modern PC workstations, and with all specific industrial software applications, as well.

"With the launch of *Safe'n'Sec Business*, StarForce turns its focus to the corporate systems segment," comments **Kirill Busukov**, StarForce Sales Director. "However, while the launch of *Safe'n'Sec Business* is important, we are still maintaining a vital interest in providing innovative security solutions for individual users through our other *Safe'n'Sec* products, as well."

For more information on where to purchase *Safe'n'Sec Business*, please visit StarForce Technologies at www.star-force.com. Enquiries from specialist distributors and VARs interested in reselling *Safe'n'Sec Business* are also welcome.
