Benefits

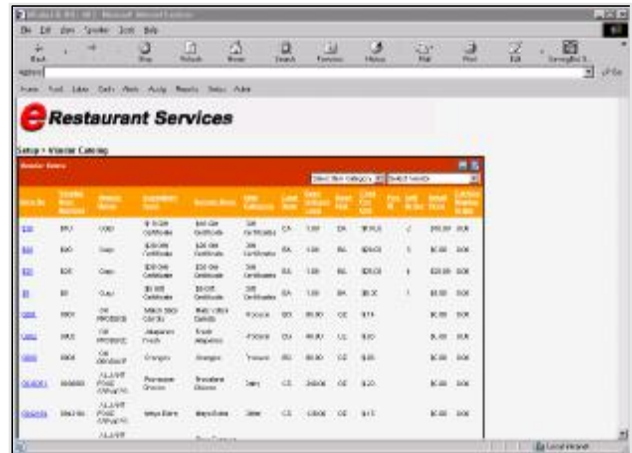

- Increase bottom line profits by 2% to 5% of foodspend.
- Insight to purchasing activities at corporate and unit level.
- Proactively manage business by identifying trends.

Key Business Tasks

- Consolidate SKU's
- Consolidate manufacturers
- Strategically align and consolidate distributors
- Rebate verification
- Accurately calculate disbursement of monies to franchisees
- Price verification against contracted prices

Integration Manager

The only foodservice solution suite with the ability to converge enterprise purchase data from back-of-house systems, distributors, and manufacturers. Integration Manager has an existing network of major distributor centers and has the ability to pull data from over 40 POS systems, including Micros, Panasonic, Compris, Aloha, and Positouch. Integration Manager's data warehouse has the capacity to handle the large volume of transaction level data typically associated with large foodservice companies. With its sophisticated data model, users can mine multiple years of data quickly and easily.

Advanced Web-based catalog management tools make it easy for distributors to maintain their catalog. Your distributors may choose from three methods of dynamic data entry: manual entry, file upload, or full service integration to their back end systems.

eVisionSM

eVision offers a wide array of reports that are designed for standard business operations. From our top-line corporate reports to unit level category reports, restaurant managers can use these reports to track and measure their business on a daily basis. These reports can be customized based on concepts, franchise groups, and individual units.

eVision includes a variety of built-in reports designed for various functional groups within your organization. Users within various functional groups, including buyers, category managers, and accounting clerks will find information that will make them more productive.

Reports Include:

- Consolidated Purchase Report (Grouped by manufacturer and SKU)
- Aggregated Distributor Purchase Report
- Operating Group / Unit Level Purchase Report
- Manufacturer Report

Features and Benefits

- Synchronize Supply Chain and Promotions
- Monitor and Audit Rebate Funds
- Connected Real-time Information Flow
- Monitor Complete Unit Activity
- Spotlight Non-Compliance Issues
- Isolate and Identify Purchasing Patterns
- Increase Negotiating Power

Collaborative Planning, Forecasting, and Replenishment Solutions For Your Chain Enterprise

eFocusSM

For the more advanced analytical user, eFocus provides the flexibility to group, sort, and filter data. Utilizing OLAP technology, the decision makers in your enterprise will be able to quickly access multiple years of data in a clear and concise manner. eFocus provides the user with the ability to quickly drill down to operating groups or categories to identify specific trends. By acting on this information, operators are able to quickly make strategic business decisions that improve profitability.

eFocus is a powerful web-based application that allows users to mine multiple years of purchase data. Customizable to your organization's structure, eVision provides you with the capability to view data based on your hierarchy, geography, fiscal period, categories, and distributors. With so many available pivot points, users can conveniently select the data points they want to analyze for a given time period, and identify purchase and sales trends.

Key Benefits:

eFocus effectively: allows companies to proactively manage their business; provides additional clarity by seeing data based on your business structure; enables the ability to see large sets of data for year-over-year analysis.

eQuerySM

eQuery provides users with the flexibility to perform ad-hoc analysis via Microsoft Excel. Users can define specific parameters and extract the data to Excel for analysis. This is great for the task oriented user that knows what they are looking for and runs routine analysis. Users can either set up their own analytic tools or select from a pre-defined set within the solution module.

Key Benefits:

For routine analysis, eQuery is an efficient way for companies to quickly download data in a consistent and efficient manner. The module is simple and requires very little training.

eContractsSM

By applying purchase and rebate contracts to eContract, corporate HQ's and operating units can calculate and monitor pricing, rebates, and purchase compliance in an efficient and expeditious manner. eContract has a simple and comprehensive interface that will accept most contract structures and terms. The full integration to the sales and purchase data allows companies to quickly analyze the accuracy of their purchase prices and rebates.

“We reduced our food costs by 2% within the first 90 days - absolutely amazing.”

AZ Holdings, Director of North American Operations

“Using the Workforce Management Suite our labor costs decreased by over 1%. Since we are staffing more efficiently, our guest service has never been better.”

Golden West Restaurants

“I Seriously believe you have the best software there is. It was the easiest to use, and in my opinion the most powerful.”

45 Unit Burger King Franchisee

“eRestaurant Services web interface allows us to directly access our information for each unit, increasing productivity and taking cost control to a whole new level.”

Multi-Unit Wendy’s Franchisee

A member of the eRestaurant Services family of enterprise class solutions for food service organizations.
