

End-End Software Knowledge Sharing September 2005

8 reasons why End-End Software could save you \$ 888,888 ++++++

1. Performance problems may be periodical, only monitor them when they are critical to business.
2. Performance problem may be due to user usage problem and not capacity problem.
3. New applications roll-out.
4. Critical remote sites.
5. User usage pattern.
6. Compare against SLA.
7. How is your Outsourcer performing
8. Why need expensive tools

With End-End Software you can now have this information at your finger tips and be proactive rather than reactive for those business critical applications.
