# **xmLaw Announces Availability of SPxConnect WorkSite Module Service Pack 1a**

SPxConnect WorkSite Module v3.0 sp1a Improves Usability, Integration and Performance  
with Interwoven's WorkSite 8

**Canton (MA), December 23, 2005** – xmLaw announced today the immediate availability of Service Pack 1a of SPxConnect WorkSite Module v3.0, the company's industry-leading integration for Interwoven's WorkSite 8 Document Management System and Microsoft SharePoint. This service pack contains several important enhancements and resolved issues, including:

- Added support for all WorkSite custom field lookups on search and profile forms;
- More than 5x improvement in performance rendering any WorkSite content in SharePoint;
- Resolved various content display issues and inconsistencies; and
- Usability and configuration enhancements, including several additional form layout examples.

"This service pack release makes it easier for administrators and end users," said Rob Saccone, President and CEO of xmLaw. "For administrators, the SPxConnect WorkSite Module can be used out-of-the-box within SharePoint and easily configured in the browser to meet specific user requirements. For users, documents are available when and where they want them, usually without requiring searching or additional navigation."

The WorkSite Module provides document management functionality in a consistent, familiar interface that adheres to an organization's customized SharePoint environment. The integration architecture is capable of supporting thousands of users without requiring WorkSite client-side software. The Module also provides secure access to documents with a configurable level of functionality for clients on extranet sites.

**- MORE -**

The SPxConnect WorkSite Module is designed to increase the value of content while reducing the overall cost associated with such initiatives. The Module requires minimal configuration and can be deployed in minutes. The included model application can be used immediately as a fully-functional alternative to Interwoven's WorkSite Web and offers significant savings when compared with similar offerings from Interwoven and other providers.

SPxConnect is designed exclusively for Microsoft SharePoint environments, including Microsoft Office SharePoint Portal Server and Microsoft Windows SharePoint Services. The WorkSite Module is part of the SPxConnect line of products which integrate multiple enterprise systems and custom-built applications in context to build rich, compelling and unique portal applications.

SPxConnect WorkSite Module v3.0 sp1a is available for existing customers by contacting [support@xmlaw.net](mailto:support@xmlaw.net). A fully-functional evaluation version of the software can be obtained by contacting [sales@xmlaw.net](mailto:sales@xmlaw.net).
