Build Setups For
Windows and .NET

"InstallAWARE has enabled me to fully support Windows Installer, yet remain in full control of what's going on."
— **Troy Wollbrink,**
TNT Software

InstallAware 5.0

Advanced MSI
Setups Made Easy

InstallAware is the premier solution for building easily-scriptable Windows Installer packages, with up to 5x better compression than typical MSI setups. Plus, InstallAware is the only MSI development solution to offer you the benefits of WebAware installation technology™.

Powerful — Yet Easy To Use

Skip the hassles of manually populating MSI tables or building lengthy MSI sequences. With InstallAware's unique scripting capabilities, simply write a condition-driven setup script, and InstallAware converts it into a logo-compliant MSI (supporting Repair, Advertising, and Install-on-demand). InstallAware provides you with all the power of Windows Installer technology, with the simplicity of a genuine scripting solution.

WebAware Installation Technology

InstallAware's unique WebAware technology provides:

- ▶ **Powerful Compression** — *Up to 5x better than typical MSI setups*
InstallAware aligns redundant bits in your setup using BCJ2 filters and trims the size of each file with the industry-leading LZMA compression algorithm, allowing you to build elegantly-small MSI installations without the frustration of typical MSI tools, and without costly add-on compression utilities.
- ▶ **Smaller Dependencies** — *Recompress Merge Modules and MSI-dependencies*
InstallAware's MSI CAB Decompressor allows you to unpack the existing CAB file streams and then apply InstallAware's superior compression to streamline packages created by different project teams or technology providers.
- ▶ **WebAware Components** — *Only download files if they're required on the target*
InstallAware 5.0's unique WebAware Components allow your setup to call out to a URL to retrieve any required file or set of files — keeping the application components, runtimes, or dependencies that already exist on an end user's system from being needlessly downloaded by the user.
- ▶ **1-Click Patching** — *One-step MSP-generation with byte-level differencing*
Just point-and-click on your old and new setups, click Build Patch, and InstallAware sweeps through each package to capture binary file differentials. It then automatically generates a native Windows Installer MSP file and packs it with InstallAware's industry-leading compression.

InstallAware is available
in four editions:

- EXPRESS
- DEVELOPER
- STUDIO
- STUDIO ADMIN

Perfect for Power Users

Though InstallAware is simple enough for beginners, it is packed with features for the advanced setup developer.

- **Two-Way Integrated IDE**
Unlike other IDEs, InstallAware's visual development and code views are always integrated. Whenever you make changes in the visual view, it updates the underlying code view, so you can fully control and customize every aspect of your setup program.
- **Genuine Scripting**
InstallAware offers the power of a scripting engine for conditional-execution of Windows Installer commands. What's more, InstallAware allows you to remain within the limits of the standard Windows Installer package, and does not require or install a separate scripting engine.
- **IIS Support**
InstallAware makes it easy to start, stop, and Install IIS websites. Set up virtual folders, and application servers. Configure permissions, default pages, and MIME types.
- **Extensive Database Support**
InstallAware connects to and runs SQL statements on Microsoft SQL Server, My SQL, Oracle, and Oracle .NET without requiring any database client software.
- **Setup Repackaging**
Simplify setup migration by capturing changes made to a system by your legacy installer. Also, convert third-party installations to MSI.
- **Automate the Build Process**
Use any programming language capable of calling Win32 DLLs to automate the process of authoring complete setup projects. The high-level automation API gives you the full power of the InstallAware IDE. Plus the redistributable build module lets you build on multiple servers.

Create the Most Impressive Setups

InstallAware's advanced interface tools will give your users the best initial-setup experience in the industry.

- **Stunning Setup Themes**
InstallAware's setup themes are unique and highly customized. Far from a change of colors or just supporting the new Windows XP appearance, setup themes bring new life to installer user interface design.
- **A Genius for Custom Dialogs**
Powerful dialog-editing tools will make you, and your software, look smart and up-to-date.
Even build interactive progress indicators with Flash-animated billboards.

InstallAware Software Corporation was founded in 2003 by former InstallShield employees. The company focuses on software installation and compression technologies for the Windows Installer platform and brings a fresh approach to the setup development process. InstallAware is supported by thousands of users worldwide, and is a Borland Technology Partner.

"I searched high and low for a way to download and install runtimes from the Internet only when they are needed. InstallAware was the only program I could find that supported all the runtimes I needed."

— **Chris Hoffman**
Mystik Media

"InstallAware will quickly handle small jobs, yet will grow to meet the more complex requirements of larger setups. Most MSI based installers we looked at lacked the ability to drop down to a scripting model, and were expensive to boot."

— **Jim Gunkel**
Nevrona Systems
