# Dr. Don's Antioxidant Dental Care Products

### Dr. Don's Antioxidant Mouthwash and Gargle™

Energized water, pasteurized EM•1® probiotics, concentrated lemon juice, elderberry extract, Spearmint oil, Menthol crystals, and organic quartz mullite

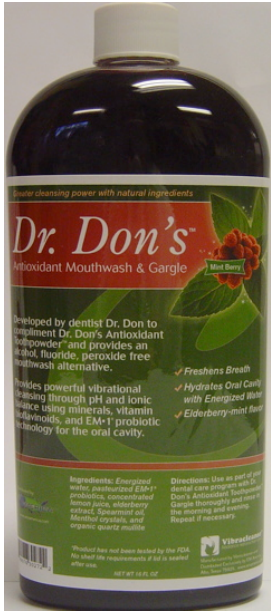

16 ounce bottle.

Dr. Don is a retired dentist who developed our dental care products because he saw the need for vibrational cleansing to deal with anaerobic bacteria that have become the dominant bacteria in the oral cavity.

Our toothpowder and mouthwash compliment each other. The toothpowder supplies mostly minerals and the mouthwash vitamins (or antioxidants).

Dr. Don has not used ingredients that encourage mutations of bacteria in the oral cavity. This is why our products are free of alcohol, bleaching agents, antibiotics, fluoride, or any other synthetic compound. With the addition of Effective Microorganisms™ Technology, Dr. Don's Antioxidant products out-compete pathogens, and create vibrational cleansing and anti-adhesion.

Dr. Don has used ingredients that have a long history of dental care use such as the cavity-fighting xylitol and antioxidant-rich cranberry, sour cherry, and elderberry extracts. Packed with high electric frequencies and no sugar calories, pathogenic bacteria will not be able to grow when Dr. Don's products are used regularly. This will help with overall health, pH balance, prevent bad breath and provide soft tissue cleansing at the same time.

### ***All dental products claim to control bad breath.***

Dr. Don's Antioxidant Dental Care products have been tested by an independent laboratory (Altcorp Labs in Kentucky) for their ability to prevent bad breath from forming. The tests proved Dr. Don's Antioxidant Dental Care products can prevent the growth of odor-producing bacteria for up to 8 hours.

### ***Why is pH balance so important?***

The oral cavity contains a very small

amount of liquid, therefore, its pH can shift dramatically depending on what people drink and eat. A healthy pH is only in a very small range. Tests have been conducted with my products that demonstrate their ability to balance pH in the oral cavity. In this pH range, pathogenic and odor-causing bacteria are unable to grow. There is a direct relationship between too acid or too alkaline saliva and diseases in the oral cavity. Since the oral cavity is the gateway to the body, controlling the growth of un-

wanted bacteria at this point is a possible way to improve overall body health.

### ***What makes Dr. Don's Antioxidant Dental Care products Unique?***

Vibrational cleansing! And, there are absolutely no toxic or questionable ingredients such as Sodium Lauryl Sulfate. Bacteria in the mouth are out-competed, not killed so there is no risk of creating mutant or resistant bacteria.

### ***What is Vibrational Cleansing?***

Simply put, the smaller the particle, the faster it moves. The particles in our toothpowder are miniscule, so they move extremely fast! The end result is a mild, but concentrated, energy field and abrasive that gently removes unwanted contaminants, including plaque, from the teeth and soft tissues.

### ***What is anti-adhesion?***

The Effective Microorganisms™ Technology used in Dr. Don's Antioxidant Dental Care products use both EM-X® Ceramic and EM•1® probiotic technology to create a small magnetic field around the tissues that prevent particles from adhering or sticking to them.

### ***Is it best to use both the mouthwash and the toothpowder?***

Yes, they are both important; they compliment one another. The toothpowder supplies the minerals to the oral cavity. Minerals are chelators that start the removal of plaques in the oral cavity. My mouthwash is made with EM•1® probiotic technology and vitamin- rich fruits that compliment the minerals of the toothpowder.
