

## **Restorative Therapies, Inc. Awarded CE-Mark For RT300-S™ Medical Device; The Company Also Earns ISO 13485:2003 Quality Certification.**

Baltimore, Maryland – February 10, 2006 – Restorative Therapies, Inc. announced today that it has received CE-Mark for its RT300-S™ functional electrical stimulation motorized cycle ergometer. Restorative Therapies also announced that it has been awarded ISO 13485:2003 quality certification from BSI, Inc., a quality management systems registrar. These awards position Restorative Therapies to market the RT300-S medical device in Europe, Canada and Australia. Sales in Europe will be accomplished through a network of distributors.

ISO 13485:2003 is currently the most stringent standard of quality control for medical devices. Restorative Therapies actively pursued this certification to ensure the superiority of its quality and business management systems.

"By earning ISO 13485 certification, Restorative Therapies is further demonstrating its commitment to producing quality medical devices," said Andrew Barriskill, CEO of Restorative Therapies. "We will continue to improve quality, customer responsiveness and remain at the cutting edge of the medical device industry."

### **About the RT300-S**

In the treatment of neurological damage, FES is used to restore motor functions to previously paralyzed muscles. The RT300-S delivers electrical currents to activate the quadriceps, hamstring and gluteal muscles, enabling patients to achieve regular patterned physical activity. "For these patients there is just no other way to get enough activity to protect their health from all the serious secondary complications that arise from immobility associated with paralysis" said Dr John McDonald of the Kennedy Krieger Institute in Baltimore, Maryland. Restorative Therapies has marketed the RT300-S in the USA since receiving FDA clearance for the device in June 2005.

### **About Restorative Therapies, Inc.**

Restorative Therapies is a privately-held company headquartered in Baltimore, Md., whose mission is to help people with neurological impairment achieve their *full* recovery potential. Restorative Therapies is one of the first companies to target activity-based therapy and FES as a potential treatment for stroke, spinal cord injury, and other neurological diseases and disorders.
