

FOCUSED NUTRITION FOR SERIOUS ATHLETES™

ATX Athlete Nutrition Technology™ and TEST Sports Clubs: Your Team for the 2006 NFL Combine, Indianapolis.

Football is serious business. TEST Sports Clubs' rigorous – and effective – NFL Combine training program prepares serious football athletes to attain peak performance at the Combine. ATX Athlete Nutrition Technology is proud to be a strategic nutrition partner with TEST to deliver a complete end-to-end Combine training solution to football athletes.

ATX Athlete Nutrition Technology™ offers the following football-specific formulas, in conjunction with TEST Sports Clubs, Inc., at the 2006 NFL Combine:

ATX Zone 5™ Neuromuscular Accelerant

Speed and alertness are critical to football players. ATX Zone 5 is a unique, proprietary formula designed to support critical pathways to improve response time and mental alertness, moving oxygen into the muscles where it is needed most. It also contains powerful antioxidants used in muscle repair.

ATX Football Recovery Formula

An injury can impact or end a football player's career. ATX Football Recovery Formula was developed based on the identification of critical pathways in important areas such as muscle energy reserve replenishment, joint protection, improved muscle flexibility, and the increase of muscle mass over time.

Why ATX Athlete Nutrition Technology? Football players train differently from other elite athletes.

And ATX Athlete Nutrition Technology products are also unlike any other nutritional supplement in the market today.

What's the difference? ATX nutritional products are the only ones engineered for specific sports. Unlike typical "one size fits all" products, ATX studies the physiological fingerprint of football players and designs its formulas to address *your* nutritional needs. The result is a superior nutrition system designed to maximize and achieve the rigorous training goals of football players.
