Oxygen Phone Manager II: A Smart Companion for Your Smartphone

New version of Oxygen Phone Manager II adds support for Samsung smartphones and extends usability of smartphone management from PC.

MOSCOW, Russia - February 20, 2006: Oxygen Software today announces the release of version 2.7.8 of Oxygen Phone Manager II for Symbian OS smartphones. This application is designed for smartphone owners who can now easily manage the content and settings of their mobile phone from a personal computer. The program is compatible with almost all models of smartphones based on Symbian OS platform and can communicate with the phone through different types of connections, including cables, Infrared or Bluetooth devices. Version 2.7.8 introduces support for Samsung SGH-D720, Samsung SGH-D720S, Samsung SGH-D728 and Samsung SGH-D730 smartphones.

"Oxygen Phone Manager II will be the best companion for your smartphone," said Nike Golubev, marketing communications manager at Oxygen Software. "Easy phone management is where it shines. For example, typing long SMS messages on the PC keyboard is a real relief compared to pressing tiny buttons and nervously switching between letter layouts. Another good thing is that you can easily restore the content and settings of the lost phone and save it to the new one. With the same simplicity, you can synch your phone with a PIM such as Microsoft Outlook and Lotus Notes or synch the phone book content across several cellphones."

Oxygen Phone Manager II features an engaging list of functions that will meet all possible phone management needs. In just a few simple steps you can load, edit and rewrite your phonebook. Also, you can send, receive and organize your SMS, MMS messages whose content may vary from plain text, images to ringtones, sounds and even animations. Along with messages, you can organize and manage your phone-based To-Do lists and schedules stored in the Calendar section.

The program also provides you with a single, easily accessible place for organizing the Gallery content, viewing images and listening to melodies. To make your phone the ultimate expression of your style, you can upload your favorite images, melodies and set your own wallpapers and logos.
