For Immediate Release:

JAVAJOBS.COM UNLEASHES NEW JOB POSTING WEB SERVICES
Web Services Allow World Wide Web to Display JavaJobs.com Postings Free of Charge

Coral Springs, FL – February 23, 2006 – Employers and recruiters that post their job opportunities on JavaJobs.com, the niche job board for Java IT Professionals, will now gain even more visibility for their available positions. JavaJobs.com recently released its first versions of their Web Services, which are free to webmasters that qualify by completing a simple subscription form to gain access to the data that will be consumed. This new provision seeks to provide clients with a value-added service, webmasters of information technology forum-like websites with a great tool, and JavaJobs.com with an increase in name recognition.

Web Service technology has existed for several years but has only become popular within the last two or three years. Few organizations take advantage of providing Web Services due to the lack of experienced technical staffing or the lack of original data in which to provide in the Web Service. Data rich organizations like GOOGLE.com and AMAZON.com have taken advantage of the technology to provide brilliant business-to-business and business-to-consumer solutions. JavaJobs.com, with its new Web Services has begun to do the same. In doing so JavaJobs.com has become one of the first job boards on the web to bring new dimension to job postings, resume searching, and job board solutions.
