Dynamic Hardware and Software Discovery, Analysis and Reporting

The Right Combination!

Synchronize Discovery with any of the LiveTime Service and Support solutions to allow LiveTime's CMDB to automatically be populated with detailed hardware and software asset information. Proceed to define service catalogues. Instantly raise incidents against up-to-date configuration items. View audit trails of item changes. Even rollback to an item's previous baseline.

LiveTime Discovery

- Provides 100% visibility of all IT assets on your network
- Accurately tracks asset location
- Works across all major platforms
- Quick to install, deploy and audit
- Helps managers understand their software assets with value-add product information
- Has the most accurate Software Recognition Engine on the market
- Provides advanced web-based reports for compliance, project management, security and optimization
- Minimal impact on network bandwidth
- Supports all types of networks, including VLANs and SubNets.

Secure Network

LiveTime Discovery puts you in a better position to assess and plan for your organization's future IT needs. What's more, with LiveTime Discovery's combination of personalized web reporting and advanced wizards, you'll be able to accurately plan costs and time-scales for upcoming projects.

Maintain Compliance

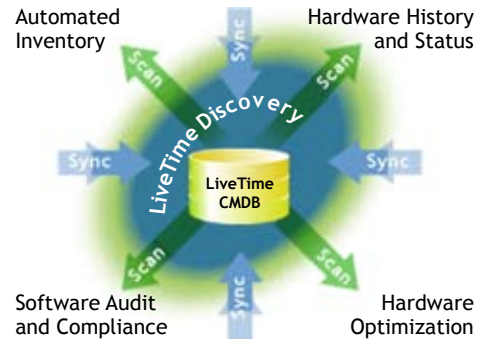

Through its unique Dashboard, stake-holders across the organization can use LiveTime Discovery to resolve business level questions. The customizable dashboard provides multiple summary reports that display specific IT asset configurations, usage and location details with the click of a mouse. The Dashboard even contains customized reports for BSA and SIIA compliance, as well as individual software vendors such as Microsoft, so you can quickly assess which software is under- or over-licensed.

In addition, the Portal eliminates the need to manually investigate unrecognized software and provides a wealth of product-specific information such as: what the software is, who developed it and if it should be licensed.

LiveTime assists in the implementation of Information Technology Infrastructure Library (ITIL) best practices.

Remote Discovery

LiveTime Discovery is the perfect solution for finding and tracking IT assets across the entire enterprise, regardless of location. Client agents can report back to the Control Center via a variety of methods, which allows even home workers and remote offices without a permanent connection to the corporate network to be tracked centrally.

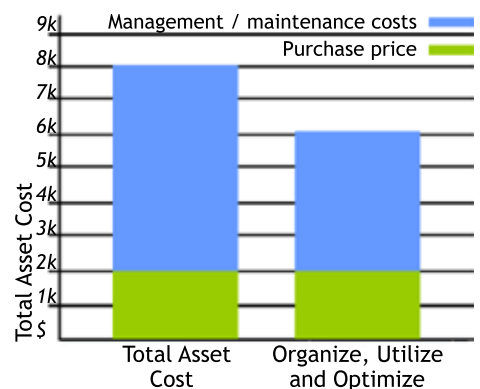

Control Costs

Accurate asset discovery information can save you money and time across all areas of IT.

LiveTime Discovery will help you:

- Save up to 25% on enterprise license renewals
- Eliminate redundant purchases by redeploying unused IT assets
- Reduce the cost of major IT projects by up to 40%
- Monitor and stop unauthorized IT purchases
- Improve help desk incident turnaround by almost 100%
- Double the rate of first-time fixes
- Cut on-site exploratory visits to PCs by up to 80%

Reduce Total Cost of Asset

Immediate Business Benefits

Audit Software

LiveTime Discovery not only finds all assets on the network, it actively helps managers understand how individual assets are being used, where to uncover savings and when to optimize the use of existing hardware and software.

Systems Intelligence

The LiveTime Discovery Dashboard provides administrators and other executive stakeholders with a clear graphical view of key systems intelligence. Each user can choose from 15 pre-configured reports covering areas such as license compliance, asset availability, project planning and risk management.

This intuitive single-page snapshot allows executives to make decisions based on real-time data for both tactical and strategic business needs.

Access is via a simple click on the 'Dashboard' tab in the Web Control Center. Users are able to select the graphs that most suit their requirements and save this selection as their personalized view.

Graphs can also be expanded to full size for easy viewing of multiple data fields and, with a choice of eight different graph styles, you will always find the most appropriate view for your needs.

Some graphs have been designed in conjunction with the BSA and SIIA, so Discovery ensures you have a complete view of your software compliance status.

LiveTime Discovery

helps organizations

gain 100% visibility and

understanding of all

IT assets on the network.

It provides dynamic business

level reporting as well as

all the detailed information

you need; from an overview

of installed software and

the configuration of every

PC, through to an accurate

and up-to-date record of the

location of every piece of

hardware on the network.
