Windows Powered Terminal for Your Smartphone

Oxygen Phone Manager II for Smartphones is a utility that effectively employs the resources of PC systems in managing and protecting the content of smartphones. The program deftly handles all types of data available in a smartphone. Interactive access to multimedia, contacts, logs, calendar entries and other features make it indispensable for all smartphone users.

MOSCOW, Russia. - April 20, 2006: Oxygen Software, the leading developer of software for mobile phones, today announces the release of an update to Oxygen Phone Manager II for Smartphones. The program known for skilful backup and management of contents in Symbian smartphones has now extended its powerful capabilities to connectivity registries, calendar entries and other phone areas. Oxygen Phone Manager II supports all the smartphones by major producers, including the most recent models. Users of Nokia 9300i will be particularly pleased to know that now they can enjoy faster data transfer with a new cable support. Besides the ability to send messages, it is now possible to dial a number directly from the computer. The new version features automated control over calendar entries and deletion of the outdated ones. On the whole, Oxygen Phone Manager II for Smartphones v2.8 better caters for various user needs and provides a wider choice of options.

"Constant demands for new functionality in smartphones make them handle bigger volumes of information," says Nike Golubev, PRO at Oxygen Software. "Their flash memory can hold hundreds of megabytes in multimedia and office documents. However, natural limitations of a handheld device make the data difficult to manage. Oxygen Phone Manager II for Smartphones helps manage the content of a smartphone faster and more effectively. Users can access all the features of their phones from a customary XP-style interface. You can, for instance, edit thumbnails or ringtones associated with contacts. Or, you can access and edit the logs of calls, packet data and messages. All the information is easy to look through and manage. Moreover, the program can backup the content to prevent accidental loss of personal information. Oxygen Phone Manager II for Smartphones is a smart tool that can both manage and protect the content of your phone."

Oxygen Phone Manager II for Smartphones is a fully fledged interactive utility that manages all areas of your smartphone from a PC. Ad hoc data editing provides instant access to contacts, calendar entries, multimedia, and more. You can easily edit or import separate entries without running full-scale synchronization. The program interface features grid and card views to ensure greater comfort of content revising. In addition to rich management options, Oxygen Phone Manager II serves as a terminal for dialup and message input. Its built-in messenger has a customary Outlook-style interface. It supports all available message types and lets you make messages of any length. Oxygen Phone Manager II is a comprehensive solution that makes better use of the rich functionality of modern smartphones.

Today's smartphones often become the extension of a workplace. They provide mobile business environment and carry important business information. Contacts, meeting schedules and memos, voice records and videos all make a vital part of our mobile life. To protect the information against accidental loss, Oxygen Phone Manager II makes a backup copy of all phone contents and settings. The user can keep the backup file on a hard drive or removable media. When you have a backup copy of the contents, phone replacement won't be a problem. One click on the button will restore all data entries, files and settings to another phone. The program will take care of its compatibility with the new model. Data backup secures your vital information against loss and instantly restores it to any phone.
