

BCP in Retail

Accord – Retailer

Designed in partnership with leading retailers, **Accord – Retailer** is a proven retail management solution which addresses the real needs of the contemporary retailer. Offering all the benefits of modern retail technology, it will enable you to operate more efficiently and compete successfully in today's highly competitive market place.

Fully integrated and modular in design, **Accord - Retailer** is suitable for a wide range of retail formats – from the specialist independent to large multi-lane, multi-site supermarkets or department stores. It covers the complete spectrum of modern retail activities, including PoS, Back Office, Central Store Management, Cash Office and Warehousing/Distribution functionality. Alongside detailed reporting and analysis features, these will allow you to automate procedures and effectively manage and control every aspect of store management and related activities. Giving you complete control over prices, margins and stocks you will be able to maximise turnover whilst streamlining stocks, improve profitability and customer service and earn an excellent return on your investment.

Hardware independent, **Accord – Retailer** will run on a wide range of platforms and interface to an extensive array of peripherals, thereby allowing you to choose the most effective platform for your needs and to protect any existing investment in hardware.

Accord - Retailer has been serving the retail market place for over 15 years and is currently controlling around 4,500 checkouts throughout the UK and Europe.

Accord – Retailer modules are available individually or as a complete suite. Here's just a flavour of what they offer:

Accord - PoS

Accord – PoS has been designed to provide fast, reliable, resilient processing, ensuring customer service and store efficiency are optimised. Facilities for in store promotional activities are included, while automated links to other modules provide full store management where required.

Multicurrency, Chip & PIN, Touch-screen technology and Webcam security are just some of the features available.

Accord – Back Office

Accord – Back Office provides a comprehensive range of back office functionality and automated procedures to enable retailers to improve overall efficiency and profitability through, for example, automated replenishment, improved stock control and better pricing control.

Comprehensive reporting, RF Hand-Held functionality, XML Ordering and many other features available to meet your precise needs.

Accord – Central Store Management

Designed to give multiple store operations a totally flexible, centralised administration facility that removes the requirement for skilled management at each store, **Accord – Central Store Management** provides the functionality required to operate a professional, efficient and profitable organisation from the centre.

Accord – Cash Office

A comprehensive, flexible system for controlling cash office procedures, **Accord – Cash Office** simplifies and automates activities and minimises manual input and paperwork, thereby improving overall accuracy and efficiency.

Accord – Cash Office is available as an integral part of **Accord** or as a stand alone solution to interface to third party retail systems.

AIMS - Accord Internet Messaging Service

Utilising the latest 'Messaging' technologies and harnessing the power of the Internet, **AIMS** has been specially designed to provide fast and economic communications and transfer of information

AIMS can be implemented as part of a fully integrated **Accord** solution or, for larger organisations, stand alone to interface with other third party retail systems.
