

PRESS RELEASE

## Jetmobile awarded Singapore patent 104066 for secure mobile printing

**PARIS, September 7th, 2006** -- Jetmobile®, a fast growing independent provider of information processing solutions, today announced that through its holding company, JetCAPS International Business Strategy, it has been awarded a Singapore Patent covering the rerouting of document across a network based on identification of users on the output peripheral, with optional encryption. The newly issued patent forms the basis of Jetmobile fast growing business in secure mobile printing and server-based print jobs retention and completes a US patent granted in May 2005.

Singapore patent number 104066 is a utility patent called "Method and system for using a selected peripheral of a network". Peripheral refers to devices generating documents, such as printers, copiers, digital projector, paperboard etc. Allowing documents to be rerouted dynamically where they are needed, often where their owner needs them to be output, helps improving productivity and managing a large quantity of documents available on-line. This patent covers technology that will allow the systems to securely forward documents where and when they are needed. The technology will find applications in enterprise, small and medium business and consumer document delivery systems. SecureJet, from Jetmobile, is the first product line including that patented technology.

That new patent awarded contains 31 claims, including a method where the user identifies himself directly on the output peripheral (printer, copier, projector...) using a keypad, badge reader or biometrics device. The server then validates the user and selectively pushes to the peripheral all documents requested by the user.

"This latest addition to our wide-ranging patent portfolio reinforces the breadth of our group technology and its many forward-looking applications," said Jean-Francois d'Estalens, CEO of JetCAPS International Business Strategy. "This achievement supports our efforts to extend the group proven technology and expertise in information and documents management and delivery. We are confident this patent will expand our fast growing business through our daughter company Jetmobile, OEM and licensing agreements even in sectors beyond our core focus."

### **About JetCAPS International Business Strategy**

JetCAPS International Business Strategy is a R&D laboratory inventing and patenting technologies in the area of information traceability, mobility and security. Its daughter company Jetmobile creates solutions that directly take benefit of the patented technologies.

### **About Jetmobile**

Jetmobile is a fast growing global developer of Web-enabled business process solutions located in EMEA, Asia-Pacific and Americas. Jetmobile solutions help organizations to work smarter gain productivity by better managing information through information validation, optimization, encryption, secured delivery and one-to-one workflow.

Set-up since 1994, the Jetmobile global VARs network covers 94 countries on 4 continents, with more than 105,000 users worldwide. Jetmobile customers are corporate companies in the manufacturing, shipping, utilities, financial services, banking and public sectors. Its products include SecureJet, BarSIMM, BarDIMM Pro and MicrDIMM Pro. For more information on Jetmobile please visit: [www.jetmobile.com](http://www.jetmobile.com).
