M5T and Global IP Sound Team up for Next Generation VoIP Solutions

M5T and GIPS forge partnership to develop comprehensive and portable Secure VoIP SIP Client SDK Solutions

Sherbrooke, Quebec, Canada, and San Francisco, CA, October 3, 2006 - M5T, the leading provider of software solutions for secure real-time multimedia communications over IP, today announced that M5T and Global IP Sound (GIPS) has teamed up to leverage their industry expertise to develop a comprehensive and portable Secure VoIP SIP Client Software Development Kit.

Based on open standards, the Secure VoIP SIP Client SDK solution will integrate the GIPS VoiceEngine - a comprehensive, packaged solution specifically designed for PC, mobile and hardware applications. GIPS VoiceEngine handles all the necessary voice components for VoIP, providing superior voice quality even under adverse network conditions. VoiceEngine supports existing standards, and offers improved voice quality by the unique configuration of its components and by improved handling of the hardware.

M5T SIP-based secure software solutions will be used to develop the set of routines, protocols, tools and other high-level APIs, which will be incorporated within this solution.

"GIPS and M5T both have a very successful history in developing best-in-class technologies for the VoIP market place, and this is an opportunity to take it to a new level that will benefit the customers we serve," said Alan Waldrip, Vice President, Eastern Region Sales at GIPS. "We are excited about working with M5T on this solution and are confident that the integration of the GIPS and M5T technologies will assure success."

Currently the Secure VoIP SIP Client SDK solution being developed through M5T and GIPS is being tested by both companies as well as by selected key customers.

"We are pleased to be working closely with GIPS - their record of success, outstanding reputation, and expertise in VoIP technology and deployment makes them an ideal partner for the M5T line of secure SIP-based software solutions and services," said Stefano Genoni, Vice President – Business Development for M5T. "Giving application developers the correct tools needed to readily create effective solutions, is the commitment behind this new Client SDK solution, and by working with GIPS, we are certain that we have achieved this."

About Global IP Sound

Founded in 1999, Global IP Sound develops embedded voice processing technologies for real-time communications over packet networks. GIPS SoundWare™ provides better than PSTN voice quality and fidelity in end-to-end IP communications with robustness against packet loss. Global IP Sound's world-renowned speech processing and IP telephony experts deliver these solutions to applications developers, gateway and chip manufacturers. Companies using GIPS SoundWare™ products include Nortel Networks, Skype, WebEx, AOL, EarthLink and other key players in the VoIP market. Global IP Sound is a member of the Intel® PCA Developer Network, the Motorola Design Alliance, Symbian Platinum Partners and Texas Instruments' third party developer network. Global IP Sound has headquarters in San Francisco and offices in Stockholm, Hong Kong and Boston. More information is available at www.globalipsound.com.

About M5T

M5T is a leading software provider delivering the latest in software technologies and security solutions to equipment vendors and chipset manufacturers developing applications for real-time multimedia communications over IP. The company develops middleware components based on a common framework layer, which forms the foundation for developing modular solutions. M5T is a wholly owned entity of Media5 Corporation. Media5 Corporation is a high technology holding company based in Sherbrooke, Quebec, Canada. For more information please visit www.m5t.com.
