

### Low Cost

The satREMOTE is a breakthrough in cost for satellite based control systems. Up front and monthly costs are equal to or less than the cost of conventional systems using cellular or paging infrastructure.

### Ultra Reliability

Because the satREMOTE uses satellite signals for activation, the system is not prone to terrestrial events or coverage holes.

### Simple Installation

The satREMOTE is designed for easy and quick installation. No programming is required.

### GPS Capable

The satREMOTE can respond back its position along with confirmation of commands.

### Worldwide Coverage

The ORBCOMM Network of Low Earth Orbit Satellites blanket the globe.

### Specifications:

- Enclosure:Nema 4 Outdoor
- Enclosure Size:10" x 16" x 6"
- Max Relay Rating:NO 15A 240AC/28DC
- NC 10A 240AC/28DC
- Power Supply:Universal 120/240AC 50/60Hz, or 12VDC
- Operating Temperature: -40C to +85C
- Indicators: LED's for "Power-On", "Satellite In View" and "Relays On"
- Solar Power: Optional

### Technical Support

The development of the satREMOTE was an in-house effort, the focus of which was a highly reliable, remotely controlled system allowing for cost effective, high volume, wide area deployment. Complete technical support is available at 1-303-531-6200.

## SATREMOTE

**The satREMOTE is a fully integrated remote control system that allows a user to turn "On" or "Off" any electrical device worldwide. The satREMOTE utilizes wireless service from the ORBCOMM Network of Low Earth Orbit Satellites.**

### The satREMOTE Advantage

**The satREMOTE remote control allows a user to control up to 3 circuits and receive confirmation back that the relevant relay was activated. Commands are sent via e-mail or a user-friendly web site. Confirmation is returned to the user via email and web page posting.**

**The satREMOTE can be located anywhere in the world. The user can be anywhere that web access is available. It is shipped fully programmed and ready to deploy. No user software or infrastructure is required.**

### The Wireless Connection

**The satREMOTE arrives fully programmed for the ORBCOMM Satellite Network. The unit is functional immediately upon installation. User commands are sent via e-mail or web interface.**

**The satREMOTE will generally receive the command in 1 to 5 minutes, depending upon antenna location and view of the open sky. Confirmation information, in most cases, will arrive back in 2 to 5 minutes.**

### About the Company

Pointer Wireless distributes easy-to-use "Plug and Play" paging products designed with ease-of-installation and use. They remotely control virtually any electrical device, from any location. Our products are designed to be easily installed and operated.
