Poco Netconf: Add automatic configuration capabilities to your devices.

AUSTRIA, 03. October 2006 - Based on [Poco](#) - the open source network-centric, cross-platform C++ library - [Applied Informatics Software Engineering GmbH](#), the expert to connect embedded systems with enterprise IT infrastructure, has currently released a C++ library for XML based Device Management, which implements the NetConf Standard.

The NETCONF protocol defines a simple mechanism to manage and configure a network device, to retrieve, upload and manipulate configuration data.

The POCO NetConf package delivers the necessary standard functionality for XML based Device Management and helps to

- reduce the implementation costs,
- ease the access to new device configuration capabilities
- reduce operational costs by implementing configuration automation.

An Overview and User Manual is available at [Reference B](#). The NetConf Package is available under [Applied Informatics Support Subscriptions](#).
