Synergistic Software Solutions Announces Warehouse Automation Solution That Improves Supply Chain Efficiency

Integrated ERP and Warehouse Management Solution for Sage MAS 500 ERP features multi-warehouse support, RF technology, Order Fulfillment and Real-Time Inventory Management

Minneapolis, MN, October 9, 2006—Synergistic Software Solutions, LLC, a software and services provider representing Sage Software mid-market business management solutions, announced today that it will resell the DCWarehouse® Solution from DCSC, Inc. DCWarehouse is a vertical solution for Sage MAS 500 ERP that allows organizations to improve the efficiency of warehouse operations with automated tools for picking, packing, inventory and shipping — the core functions of the modern warehouse. Cost savings from customers adopting warehouse automation technologies typically result in improvements in supply chain efficiency that helps in offsetting rising fuel and material costs.

“Synergistic Software Solutions is now an authorized reseller of DCWarehouse,” said Randy Stone, Director of Sales and Business Development for Synergistic Software Solutions, LLC. “Many of our clients need to be able to take their manufacturing automation to a different level of efficiency. DCWarehouse allows businesses to streamline operational processes through the use of Radio Frequency (RF) devices. Using DCWarehouse can help our customers expand their business and provide better levels of service.”

Warehouse Automation includes all the activities related to receiving, storing and shipping materials from production or distribution locations. The DCWarehouse and Sage MAS 500 ERP combined solution extends this core functionality through the use of Radio Frequency (RF) and mobile technology (Palm Pilots or CE devices) along with additional warehousing and production capabilities. RF compliance allows the receipt of RF-labeled products from suppliers, the printing and applying of tags to product shipped from facilities, test of encoded EPC tags, and a summary view of all RF related activities.

“The problem with warehouse automation systems is that they don’t integrate well with new or existing business systems,” said Kirsten Austin, president of DCSC, Inc. “Inventory management, for example, is not real-time and these systems also don’t integrate well with shipping solutions. These issues were some of the driving factors in our development of DCWarehouse as an integrated solution for Sage MAS 500. We provide organizations with a completely integrated solution that looks and feels the same which helps to accelerate the automation of warehouse functions.”

Key capabilities of DCWarehouse include:

- Built with Sage MAS 500 tool set
- RF technology support
- Easy installation & deployment
- Drag ‘n drop graphical capabilities
- Flexible configuration
- Customer returns
- Serial number Support
- Productivity inquiries and reports
- Labeling
- Pick list generation
- Supports wave picking and rapid picking
- Automated cycle counting
- Inventory transfers and movement

About DCSC and DCWarehouse

DCSC, Inc. is the software publisher of DCWarehouse, a proven solution for Sage MAS 500 ERP that allows organizations to improve the efficiency of warehouse operations with automated tools for picking, packing, inventory counting and shipping — the core functions of the modern warehouse.
