

The best peer-reviewed literature, multilingual and gifted consultants, research tailored to your risk analysis and strategy needs

Not only will opt-in involvement guarantee that your areas of concern will be included in the scope of the research project; but each sponsoring entity receives interim and final research information and results before they are provided to universities, the public and the media. The researchers involved maintain strict integrity as to their methodology and results, however the Opt-in Programme allows you to ensure that the questions asked match those of practical importance to your company or government.

The Opt-in Programme offers several options ranging from partial sponsorship of an ongoing project to full commissioning of a new study in Space Law or Innovation Policy.

Whether you're looking for the best peer-reviewed literature in the field, highly relevant consulting services or quality research, don't hesitate to turn to us for assistance.

SPACEPOL
Government Policy Consulting

In 1998 SPACEPOL was the first virtual research network for Space Law and Public Technology Policy...

...Today we are the most innovative expert-run consultancy and publishing house for these fields.

Responding to Tomorrow Today

***WE HAVE THE KNOWLEDGE
YOU NEED TO PLAN AHEAD AND
SUCCEED***

MAKING RESEARCH WORK

What can be done with knowledge generated by basic legal and policy research? What are the practical implications and uses?

Our company has a history and reputation for asking these questions with respect to the fields of Space Law and Public Innovation Policy. Since 1998 when we founded the first virtual research network to unite the best minds in our fields of expertise, we have sought new ways of applying what we know about law and policy and new contexts in which to do so.

QUALITY KNOWLEDGE

Each SPACEPOL consultant is among the best in their respective field, having graduated with highest marks and having numerous recognitions and awards including membership in societies requiring peer recognition such as the International Institute of Space Law (IISL).

We presently have a very developed expert network which implies that the latest and best knowledge about research and practical events in our fields is at our fingertips. Our knowledge of national and international political and legal trends provides us with the background information we need to analyse areas of concern to the international aerospace community, to governments and to research centres.

We are constantly developing better research methods and finding new and ever more innovative ways in which to provide our clients with highly relevant consulting and research services in Space Law and Innovation Policy.

All SPACEPOL consultants are multilingual and have experience from several countries. As such, they can follow legal and policy trends in many regions and develop very diverse networks of knowledge.

PRODUCTS AND SERVICES

SPACEPOL is a wholly expert-run enterprise. We are a centre of excellence in Space Law and Public Policy. Our complete knowledge

system entails three key activities each one contributing to the quality of the other. We conduct basic research within our fields, connected to national universities and peer-reviewed for quality. We offer expert consulting services based upon our experience and the knowledge produced by our research. Finally, we disseminate the latest knowledge in our fields by producing peer-reviewed publications as an academic publishing house.

MEETING YOUR NEEDS

Through our Research Project Opt-in Programme companies and government departments can ensure that a SPACEPOL research project includes questions and issues important to their industry or government. For instance a comparative study of the possible effects of changes in UN-sponsored space law on the aerospace industry in a particular country or region can be tailored to include the country and national industry of a partner involved in sponsoring the research project.
