### **Banks and Credit Unions Save Money With A COBIT Jumpstart**

*Las Vegas, NV – ComSec, Inc. announces a COBIT Jumpstart service for Banks and Credit Unions allowing organizations to embrace the best-practice framework gradually. Regulations are aligned with the framework- mitigating redundant activities. Best practice strategies provide guidance and simplify remediation by supplying pre-existing documents and process. Organizations identify pertinent performance indicators, allowing for clear visibility into the quality of the security program. The resulting benefit is a reduction in TCO of existing systems and improved ROI on future projects.*

The intent of the Control Objectives for Information Technology(COBIT) framework is a comprehensive set of tools allowing managers to gain clear visibility into business risks, technical issues, and control requirements. It directly aligns with the various regulations (FFIEC, OTS, OCC, NCUA, FRB, GLBA, PCI, HIPAA, SOX, etc.) affecting financial institutions. The breadth of the framework is often daunting- many organizations can see the benefit yet cannot get their arms around implementation. "The changes evoked by a COBIT implementation are substantial. We provide the oversight and experience necessary to kick-start a successful implementation," said Jeromie Jackson, CEO of ComSec.

Organization's are looking to improve the quality of their IT environments. Cost reduction and maximization of existing resources are two of the primary areas for improvement. COBIT provides the proven framework to accomplish this goal. Policies, procedures, implementation, testing, training, and management are all clearly defined within the control objectives. Conducting a security and regulatory assessment provides a snapshot of the current security posture. ComSec works jointly with business executives to identify, and document, strategies, key performance indicators, and the tactical approach.
