Proveout.com Announces Two-way Phone Verification

London, UK – October 25th, 2006 – Proveout.com offers new service opportunity where Third Party dials Proveout.com and passes phone verification.

New feature allows Third Parties to dial Proveout.com at any convenient time using certain phone number and pass phone verification as usual. Upon establishing connection, Proveout.com reads the voice menu and Third Party enters verification data by pressing buttons on phone keypad.
This feature may be used in many areas for verification any data e.g. confirmation or access code, order number, registration approval and so on. Results of phone verification can be later viewed at Merchant's site or in Member's area at Proveout.com.

Proveout.com charges certain amount for dedicated verification phone number each month. Call price depends on a country where a dial in phone number is located. Proveout.com charges lowest price for call to such country according to the price list.

Alexey Pokataev, Founder of Proveout.com, comments, "Two-way phone verification where Merchant can choose whether to initiate a verification call immediately, to schedule a call or allow a Third Party to make a call himself at any convenient time is a perfect fraud detection and identity theft prevention tool".

About Proveout.com:
Proveout.com, owned by Lommeks Systems Ltd, offers various telephone verification services based on VOIP technology. Telephone verification includes a range of supporting tools such as phone type identification, country and city identification by phone area code that maximize accuracy of telephone verification.
