

Streamphone 2.5 is a next generation wireless video call / conferencing communication solution.

Today, Instantstream™ released Streamphone™ version 2.5 and seeks telecommunication servicing partners in many countries for the upcoming global expansion. Streamphone 2.5 is a next generation wireless video call / conferencing communication solution. Streamphone Ready customers travel the world with only one Streamphone, PC or PDA and make video conference calls to any country in the world for as low as .02 cents a minute in Europe, Asia, South America, Africa, Middle East, the United States and the rest of the world. Streamphone™ 2.5 is factory installed on most computing device by the manufacturer and 526 million people are Streamphone Ready today.

New York, NY (PR Web) November 20, 2006 -- Today, Instantstream™ released Streamphone™ version 2.5 and seeks telecommunication servicing partners in many countries for its upcoming global expansion. Streamphone 2.5 is a next generation Internet 2 software enterprise video call / conferencing communication solution. Instantstream customers travel the world with a single Streamphone Ready™ Smartphone and make video conference calls from any country in the world at local rates. Unlike all the other video conferencing services and telecom video call solutions in the world, the Instantstream.com solution costs the same as a local phone call. Streamphone™ 2.5 is compatible with all current computing devices. Streamphone™ 2.5 is factory installed on most computing devices by the manufacturer. Therefore, 526 million people are Streamphone Ready today! Further, Streamphone™ 2.5 is now operational and providing video call services for as low as .02 cents a minute in any country.

Over the last 7 months, the Instantstream team has traveled the world on a global road show demonstrating this new video conferencing call service to governments, military, organizations, global corporations and consumers.

According to CEO Michael Daly of Instantstream.com "Over the last 12 months, based on our core Streamphone and IMLEC Technology, we at Instantstream, Inc., developed the next generation Video Conference Call service, Distance Learning, Military and Defense, Homeland Security, Police Protection, Border Patrol and Surveillance, Mobile Video Surveillance, and Airline Security Surveillance Applications." Mr. Daly further stated, "Over the next coming months, Instantstream will develop industry partners for the marketing and sales of these new technologies. We are making ready, a scheduled release of these new applications with partners so stay tuned for the next press release." By developing the Streamphone™ video communication technology, Instantstream is providing a cost-effective alternative video conferencing solution to organizations, companies and people around the world. Streamphone is now installed on more than 526 million Computers, Smartphone's (Lenovo et960, Samsung i830 , Samsung i730, Lenovo i921 , HTC P3600), Pocket PC's (HP iPAQ hx4705 Pocket PC, Dell x51v), Ultra Mobile PC,s (UMPC), (Sony ux280p , Samsung Q1, Dualcor), PDA's, Cell Phone's around the world. Best of all, Instantstream customers don't require the services of a computer expert to set up, schedule and run video conference calls. Customers only need a computer, a web-cam, a headset and the desire to be Streamphone Ready.

Streamphone combines the value of low cost email, the simplicity of phone contact and the impact of in-person meetings with the marketing reach of an interactive web site – all within one online e-conference solution.

About Instantstream

The Power of Instantstream™ It is time to get a good look at the future: It's called Instantstream™ and Streamphone2.5. They will allow individuals to talk face to face with anyone, any time, anywhere in the world, with up to 50 participants and more than 50,000 viewers for business or personal needs. Anyone or any organization receiving a video conference call is Streamphone Ready today and they can see, speak and interact with anyone else in the world. Streamphone has no contracts, no yearly commitments, no down loads, no technical issues and the bottom line is there are no problems. Just Click, Connect, and Collaborate to more than 526 million people, organizations, companies and governments around the world.

Instantstream Multimedia Communications, Inc. was founded in 2004. The company offers its clients a universal communications service that is accessible from any computer, any web browser, any pocket PC or Smartphone devices from any location. Using the company's primary product, Streamphone, users can hold individual conversations, proactive team meetings, live video press releases, ipTV broadcasts, promotional interactive content, mobile content, online distance educational classes and sales demonstrations. In addition, Regulation "FD" Fair Disclosure, Corporate Earnings and Remote Board Meetings, using audio, video and synchronized Power-Point slides can also be accomplished. Our product differs from similar stream technology as it is powered by our Interactive Multimedia Local Exchange Carrier (IMLEC). This technology allows Streamphone to be delivered to any computing hardware and any cell phone or PDA in the world without an investment in additional hardware. Mr. Daly commented, "The technology thereby enables carrier-class services that integrate enterprise class business applications, voice, video and data to offer true interactivity and Web communications across multiple geographies and platforms."
