

For Immediate Release

PTI Appointed North American Distributor for Packon Liquid Filling/Capping Systems

Incheon-City, Korea and Tuckahoe, NY (November 17, 2006) – Pack Cheon Machinery Co., Ltd. (Packon) has appointed Packaging Technologies & Inspection (PTI) as their North American distributor for Packon liquid filling & capping systems.

Tony Stauffer, president of Packaging Technologies & Inspection, stated “Packon systems achieve high filling accuracy of +/- 0.1%, which is an exceptional rate. They have met the challenge of uncontrolled giveaway of product from filling deviation and eliminate the accumulated cost associated with this product loss. This is a significant consideration when investing in high speed filling equipment. We are pleased to promote Packon’s high quality, high performance line in the North American market.”

Packon offers rotary liquid filling and capping machines that use a 2-step net weight filling principle. The 2-step filling process is done first by rapid “mass flow” filling to achieve the target speed and then a second step “fine flow” to achieve high filling accuracy up to the last drop. Product filling applications include beverage, personal care and industrial products. Standard systems are designed for wash-down execution. For combustible products, explosion-proof configurations are available.

Seong-Gyu Kang, president of Packon, stated “Our company focus is high quality and performance. We take great pride in the amount of repeat business we receive from our customers due to the reliability and performance of our equipment. Packon systems are a perfect complement to PTI’s packaging machinery offerings. Together with PTI, we will be better positioned to provide solutions for high speed liquid filling and capping applications in the North American market.”

PTI is an end-to-end packaging solutions provider, specializing in pre-made pouch, cup & tray filling/sealing applications and sterilization equipment. Through its diverse distribution, representation and OEM activities, you can rely on focused consultancy services, “gold standard” technology solutions, and unparalleled engineering support. From product development, through market launch, and next generation lightweighting, count on PTI Packaging Systems to offer packaging solutions with a focus on your bottom line.
