# TCM ▶ jet Stream mfg™

Powered by: DASH

Simple Visual Shop Control

Smooth Operations. Just a dream for most manufacturers. But, it's a reality for jetStream users. With out-of-the-box functionality and intuitive operation, jet-Stream quickly streamlines and optimizes operations to increase productivity and generate a quick return on investment. For one or multiple manufacturing plants, jetStream expedites your scheduling process...without the complexity and expense that traditionally come with other systems.

Add genuine "flow" to your workflow. jetStream mfg™ is an advanced, paperless manufacturing management solution that simplifies and improves every aspect of your planning, scheduling and reporting. With simple drag-and-drop ease, jet-Stream allows you to optimally sequence operations for orders. By enabling you to quickly, efficiently and accurately match capacity with capabilities, jetStream helps you capture your plant's full productivity and potential.

Real-time communication. jetStream delivers a true collaborative process between logistics and production. Orders flow from intake to the shop floor with ease and accuracy. Shop personnel see the visual plan for their own work centers and report activity with as little as one click. Up-to-minute status is readily available. With all production details at your fingertips, you have the facts you need to make the best decisions for your operation, right now.

Intelligently designed. jetStream was created for your manufacturing realities and easily integrates with your existing ERP system. It not only helps you create valid day-to-day production schedules, it enables you to generate what-if scenarios to effectively schedule the future.

Product Features...

- Intuitive features and user-friendly graphical displays translate to increased productivity and better decision-making with minimal training.

- Ability to optimize sequencing and slotting of tasks and operations increases throughput, machine utilization and inventory turns.

- Drag-and-drop scheduling adjusts plans in real time and lets you see the impact

- Visual alarms instantly alert you to exceptions, bottlenecks or other issues for proactive decision making and minimized downtime.

- One-click production viewing and reporting keeps everyone – the front office, logistics, the shop floor – in sync and up to the minute.

- Ability to schedule shop floor down to the minute helps eliminate slack time and overlaps, while enabling you to deliver on promise times.

- Scheduling ability is comprehensive with an unlimited number of resources, resource hierarchy and ability to schedule forward and backward.

- Integration with your TCM System lowers your costs and enables real-time enterprise-wise communication without the need for posting and batch updates.

- Convenient access to relevant documents such as drawings, work instructions, ISO procedures and more is available through built-in integration with ddxArchive.

- Feature-level security to tailor the application to each individual user.

- Customizable to meet your unique challenges.

- Modular design enables you to use the scheduling tool, the reporting tool or both.

Hardware & Software Requirements

Server
- Operating System options include: Windows 2000 and 2003 with latest service packs.
- SQL Server 2000 (Standard Edition is acceptable) with latest service packs.
- Server Hardware - PC Compatible
- Processor: 1.5 ghz or better
- Disc: 5gb minimum available, for jet*Stream* software installation (includes reserve for minimal data set and 500 mb for SQL server)
- Memory: 1gb RAM or better
- Additional disc space, memory and processor speed – see recommendations from Microsoft for SQL Server.
- Access to server for installation, training and support – Internet / VPN (dedicated support modem may be acceptable, but may result in additional costs to the client)
- Backup device for server – your Server should be performing regular backups every evening
- PC Anywhere, Remotely Possible or VNC – used for Support.
- Network or FTP access to the TCM Server (TCM on Windows, versions 6.x or above preferred)

WorkStations
- Operating System: Windows XP Pro, 2000 Pro
- Hardware - PC Compatible
  - Shop Floor Client: 512mb Memory (1gb recommended), 1ghz Pentium or better
  - Planner: 1gb Memory, Pentium 4, 1.8ghz or better, large screen monitor or dual monitors preferable
  - Planner screen – view only: 512mb, 1ghz Pentium or better
  - Disc Space: 10mb
- Network Access to the server
- Standard Windows Printer (laser or inkjet) - optional
