FOR IMMEDIATE RELEASE

ORION NLJD Cell Phone Detection Equipment Featured in Investigative Report on Cell Phones in Prisons

Philadelphia DA Lynne Abraham says an inmate with a cellular phone is an invitation for death for someone, witness intimidation, or destruction of a criminal case... creating a recipe for a catastrophic event.

Algood, Tennessee, November 27, 2006 – Fox News Undercover Investigation explores the problem and technological solutions of contraband cellular phones being smuggled inside prisons and into the hands of dangerous criminals where they can be used to jeopardize criminal cases, endanger witnesses, even costing lives... This epidemic in the correctional system represents the fastest growing form of prison contraband creating a catastrophe waiting to happen.

The ORION Non-Linear Junction Detector, manufactured by Research Electronics International (www.reiusa.net), is featured in this news story as one of the leading technologies being used to combat the cellular phone problem inside correctional facilities. The ORION is unique in that it responds to electronic components, allowing the user to detect and locate electronic items (such as hidden cellular phones), even if the cell phone is turned off or not transmitting. This technology offers a working solution for correctional facilities to manage one of the largest problems confronting prison systems today.
