

OPERATIONAL RESPONSE TO MASS CASUALTY INCIDENTS

THE ORMAC COURSE

LEARNING ABOUT TERROR AND BEING DETERMINED TO PREVENT IT IS A SUPREMELY IMPORTANT GOAL.

However, without a sound, coordinated and well-drilled approach to an incident of Mass Casualties, we will never be able to confront acts of terror or natural disaster effectively.

This highly acclaimed program, given by one of the world's experts on MCI's, uses the Israeli approach in a US context to effect a real change in your community. The presenter shows why an MCI is less about medical response and more about organizational response.

The course can easily be customized for hospital staff or for medical personnel and deal with specific aspects of treating MCI patients. The program is given over one or two days and has been designed to do nothing less than get your community ready. Using principles learned from a Medical Commander at some of the worst MCI's in Israel and all over the world.

WHO SHOULD ATTEND:

Fire - EMS - Law Enforcement - Emergency Managers
Doctors - Nurses - Respiratory Therapists - Hospital Administrators

PROGRAM

Principles for Management of Mass Casualty Incidents:

- Adapting the Israeli approach to the American medical response
- Definition and characteristics of mass casualty incidents
- Lessons learned from deployment to remote disaster areas
- Conventional, CBR mass casualty incidents
- Blast injuries
- Hospital triage: site organization and principles
- Principles of triage and decontamination for CBR mass casualties
- "Bug Hospitals"
- Field management
- The ten commandments for sudden mass casualties
- Organization of drills and much more
