## **“We Find Wii” Software Helps Shoppers Find and Buy the Elusive Nintendo Wii**

Arlington, VA – January 3, 2007 – Software company VersaEdge Software LLC today announced We Find Wii software, providing shoppers an easy way to find a Nintendo Wii console online.

Product Manager Chris Anderson says, "People everywhere are searching for Wii's. I myself stood in line for hours at a Target only to be disappointed. So we made this software for ourselves. Now that we know We Find Wii works (we all have Wii's), we're offering it to the public so that people can find Wii's online more easily."

We Find Wii runs as desktop software that searches the sites you want. Then it sounds an alarm when it finds a Wii is in stock for an Internet purchase. You must then act fast because most sites only keep Wiis on sale for a very short time period of a few minutes or seconds.

There are other services that search for Wii's. Contributing software developer Alex Furlong says, "We looked at the competition but found a few problems. First, even the best systems were too slow to notify you. In theory they were fast, but they relied on multiple networks to be working quickly. So we decided to make desktop software that had no middle-men needed in the alerting process. Second, other systems did not have the ability to check all the sites we wanted to search, so we expanded that list. That's how We Find Wii was born."

We Find Wii features:

- Ability to search online sales availability at multiple retailers
- Fast Alert Responder Technology™ to notify users of Wii availability
- Customization to only check the sites you want
- Free updates

We Find Wii has a free demo that will work for 5 minutes at a time. The full version costs \$4.95.
