JobOps Announces New Release of JobOps Version 4.10

JobOps Version 4.10 is Now Available for Sage MAS 90 and MAS 200 ERP Version 4.10; Latest Version of JobOps Offers Usability and Productivity Enhancements to Users

Minneapolis, MN, Jan. 8, 2007 — JobOps, a Job Management Software solution that works with Sage Software's MAS 90 and MAS 200 ERP systems announced today that it has updated its flagship JobOps Job Management Software. The latest release delivers greater usability and compatibility with Sage MAS 90 and MAS 200 Version 4.10, the most current version. JobOps is a comprehensive solution for automating job management functions for manufacturing, distribution, and field service organizations and it is the preferred choice for hundreds of North America's small and mid-sized businesses. JobOps Version 4.10 is shipping now.

"Our new release of JobOps delivers immediate value by its compatibility with Sage MAS 90 and MAS 200 Version 4.10 release," said Cindy Olson, Director of Product Management, Synergistic Software Solutions, the software publisher of JobOps. "In JobOps Version 4.10, we've enhanced several key features that will facilitate more productive workflow and integration with Sage's core ERP functions. In addition, our new version is fully compatible with the new ACT! Link for ACT! by Sage CRM solution, offering clients a seamless solution for managing customer interactions."

Key enhancements to JobOps Version 4.10 include:

ACT! Link for ACT! by Sage 2006 Version 8.0

- The ACT! Link for version 4.10 is now compatible with JobOps Version 4.10 and can be used concurrently. For example, Sales Orders with work tickets can be created through the Sales Order or Sales Quote Entry MAS 90 task within ACT!

Work Ticket Enhancements

- Work Ticket Parts Entry function has been incorporated with the new Sage MAS 90 and MAS 200 business framework, and includes features such as dual grids for line item entry; drag-and-drop field columns with the ability to sort and hide columns and to export parts list to Excel, etc.
- Work Ticket Entry — the Activity Code field is now available on default step 000 for work tickets whose work ticket class allows steps, as well as for item-based work tickets. In addition, the Labor, Direct Cost and Status information screens now have resizable and sortable columns.
- Retention amount tracking is now available for work ticket invoices without having to install and activate the Job Cost module. With this option, a retention amount may be specified for an invoice with work tickets.
- The Work Ticket Billing Selection function has been enhanced with buttons to set all work tickets for the order to be billed complete, partially billed or skipped.

Component Exception Manager

- The Maximum Stock Level item warehouse Reorder Method is now considered in the calculation of a demand item's Actual Quantity to Buy.

Time Tracker Cross Midnight Automated Logins

- Time Tracker's Single and Multi-Employee Entry modes have been enhanced to accommodate shifts that cross midnight so that the time entry's transaction date may get automatically set to the current operating system date when a new login occurs for the first time in the new date.

Periodic Labor Register/Update

- Time Tracker's Periodic Labor Register and Update functions can now be processed when there are invoices in sales order's invoice data entry that are all non-work ticket related.

Sales Order/Quote History

- Work Tickets and Sales Orders created from Service Ticket Entry and Preventive Maintenance Generation now update to the Sales Order/Quote History files. Additionally, changes made to a service ticket affecting sales order lines also update the Sales Order/Quote History files.

Shipping Data Entry

- Work tickets whose work ticket class is assigned the Percent Complete cost recognition method may now be shipped through Shipping Data Entry. Additionally, work tickets whose work ticket class is assigned the Technician Scheduling Method (Field Service work tickets) may now be shipped.
