

Nulogx Dynamic Optimizer

Nulogx Transportation Management Suite gives organizations the power to maximize profits, control costs and improve operational efficiencies. Armed with Nulogx TMS, businesses can provide the best transportation service and make informed, fact-based decisions that will lead to improved performance, greater profitability and a solid competitive edge.

D-OPT

Nulogx D-Opt provides fully automated, continuous optimization of shipments. D-Opt is a significant advancement in optimization technology; exploiting opportunities unavailable to traditional batch optimization processes and engines.

Dynamic optimization is valuable to those organizations that process orders in real time, near real time or frequent batches throughout the day and smaller organizations who previously could not achieve a viable ROI with batch optimization.

Benefits

In addition to Nulogx Transportation Optimizer...

- Significant cost improvement over batch optimization plans
- Increase productivity of high value resources
- Focus efforts toward managing and resolving load and shipment exceptions

Available Software Solutions

- Nulogx Transportation Optimizer (TO)
- Nulogx Dynamic Optimizer (D-OPT)
- Nulogx Transportation Control (TC)
- Nulogx Portals
- Nulogx Carrier Bid
- Nulogx Export Docs

Capabilities

- Continuous, real time optimization of all relevant, available shipments.
- Fully automated shipment selection, optimization, load creation and load execution.
- Multiple Optimization Queues with rules and strategies specific to Customer, Region, Division or other delineation.
- Continuously evaluates the impact of new shipments as they become available, creating new opportunities for cost reduction.
- Customer ship or delivery date is given highest priority in Load Optimization and shipment execution decisions
