ANSWERS TO THE MOST FREQUENTLY ASKED QUESTIONS

Steel Building Store
Find the least expensive way to buy a steel building!

Why should I choose **Steel Building Store**?

Although there are several steel building companies to choose from it's important to know that we are definitely not created equal. Many steel building companies use the fact that you may not know the difference between one building and another. **Steel Buildings Store** takes the time to find out what you need and will show you the options that can affect your pocket book as well as the quality of the building you receive. Our project coordinators will guide you through the entire process from concept to delivery, showing you the best and least expensive way to accomplish your project.

Why choose a steel building over other methods of construction?

Steel buildings offer a cost effective, flexible, low maintenance and energy efficient structure that can be designed to fit almost any situation. Every steel building from **Steel Building Store** comes pre-punched, pre-cut, pre-drilled and pre-welded. By using this steel building manufacturers process, it allows for the building to be erected in a fraction of the time. Steel is the least expensive material of all the available methods of construction, with low initial building cost and virtually no maintenance along with a 25 year limited warranty, steel is a hands down winner.

Who will erect my building?

You may be surprised to know that on smaller building projects many of our customers choose to erect their own. For larger building projects, or ones you don't wish to tackle on your own, have no fear. **Steel Building Store** has access to erectors all over the country that know our products and will be happy to erect your new building.

Can you deliver anywhere in the USA?

Yes. **Steel Building Store** are shipped from 12 manufacturing plants within the US. All of our shipping points are AISC certified (American Institute Of Steel Construction) and in good standing with the MBMA (Metal Building Manufacturing Association). We take great pride in only using American steel, ensuring that our customers receive only the best quality commercial steel buildings and steel warehouses available.

Will a steel building conform to my local building codes?

Steel Building Store are engineer stamped and certified for all US and local building codes including snow, wind, seismic and exposure ratings.

How long does it take to get a building delivered?

Most buildings can be manufactured in as little as 4-6 weeks depending on the size and complexity. It is important to know that every steel building from **Steel Building Store** is custom manufactured and during certain times of the year the process may take a while longer.

Can you insulate a steel building?

Yes. Insulation for a steel building is a little different from what you might be use to. **Steel Building Store** carries all types and R-value insulation specifically designed for steel buildings.

ANSWERS TO THE MOST FREQUENTLY ASKED QUESTIONS

Will I need an engineered foundation design?

Local building department requirements may vary. The best way to know is to call your local building department and ask. If you are required, **Steel Building Store** can provide you with one for an additional fee.

Can I choose the color of the building?

Yes. We have several colors to choose from, and you may select the wall and trim color at no additional cost.

Does a steel building have to look like a warehouse?

Not at all, by choosing one of our many exterior options you can make the outside of your new building look like stone, brick, slate, or stucco. We also have a full line of doors, windows and accessories that give you the ability to customize your new building..

Do you offer financing?

Yes, through arrangements with several national lenders we offer programs including non-profit, commercial and signature loans. We also have several lenders that specialize in church financing ranging from start ups to multi-million dollar projects.

STEEL BUILDINGS NO LONGER HAVE TO LOOK LIKE A WAREHOUSE

Steel Buildings no longer have to look like a warehouse

Steel Building Store works with companies and organizations all over the United States, many of which love the advantages of steel buildings but need a more conventional look. *Steel Building Store* can be designed to look almost any way you can imagine, including stone, brick, slate and stucco. *Steel Building Store* also carries a complete line of personnel doors, roll-up doors, windows and accessories that can help customize your new building project. When you begin to design the look of your new steel building you will find that there are many options available. We believe that of all the choices available, Dura-flex is the best.

Dura-flex is a lightweight, premixed, color integrated stucco textured product that is perfect for steel building applications. The product can be easily applied using local labor and by spraying directly onto the steel sheeting, making installation fast and cost-efficient. One installer and a helper can apply as much as 5,000 square feet a day. Steel buildings as with most structures, expand and contract with temperature changes, causing a variety of problems for most stucco products. Dura-flex can stretch up to 105% of its size without cracking or peeling and comes in almost any color you can imagine.

We believe the most important things in the purchase of a prefabricated metal frame building is quality, customer service, cost, on-time delivery and warranty. Therefore we make sure the following are strictly enforced.

Quality

Steel Building Store provides only top-quality American made buildings and accessories.

On Time Delivery

Steel Building Store schedules delivery dates to suit our customers needs insuring an on time delivery of each and every product we sell.

Customer service

Steel Building Store provides all of our customers with a project coordinator that will walk you through the entire project from concept to delivery. We offer what we believe to be the best customer service in the industry.

Warranty

Steel Building Store stands behind our products long after delivery is made. We offer 20 year warranty protection on our steel buildings, and have several warranty programs on the different components and accessories we carry.

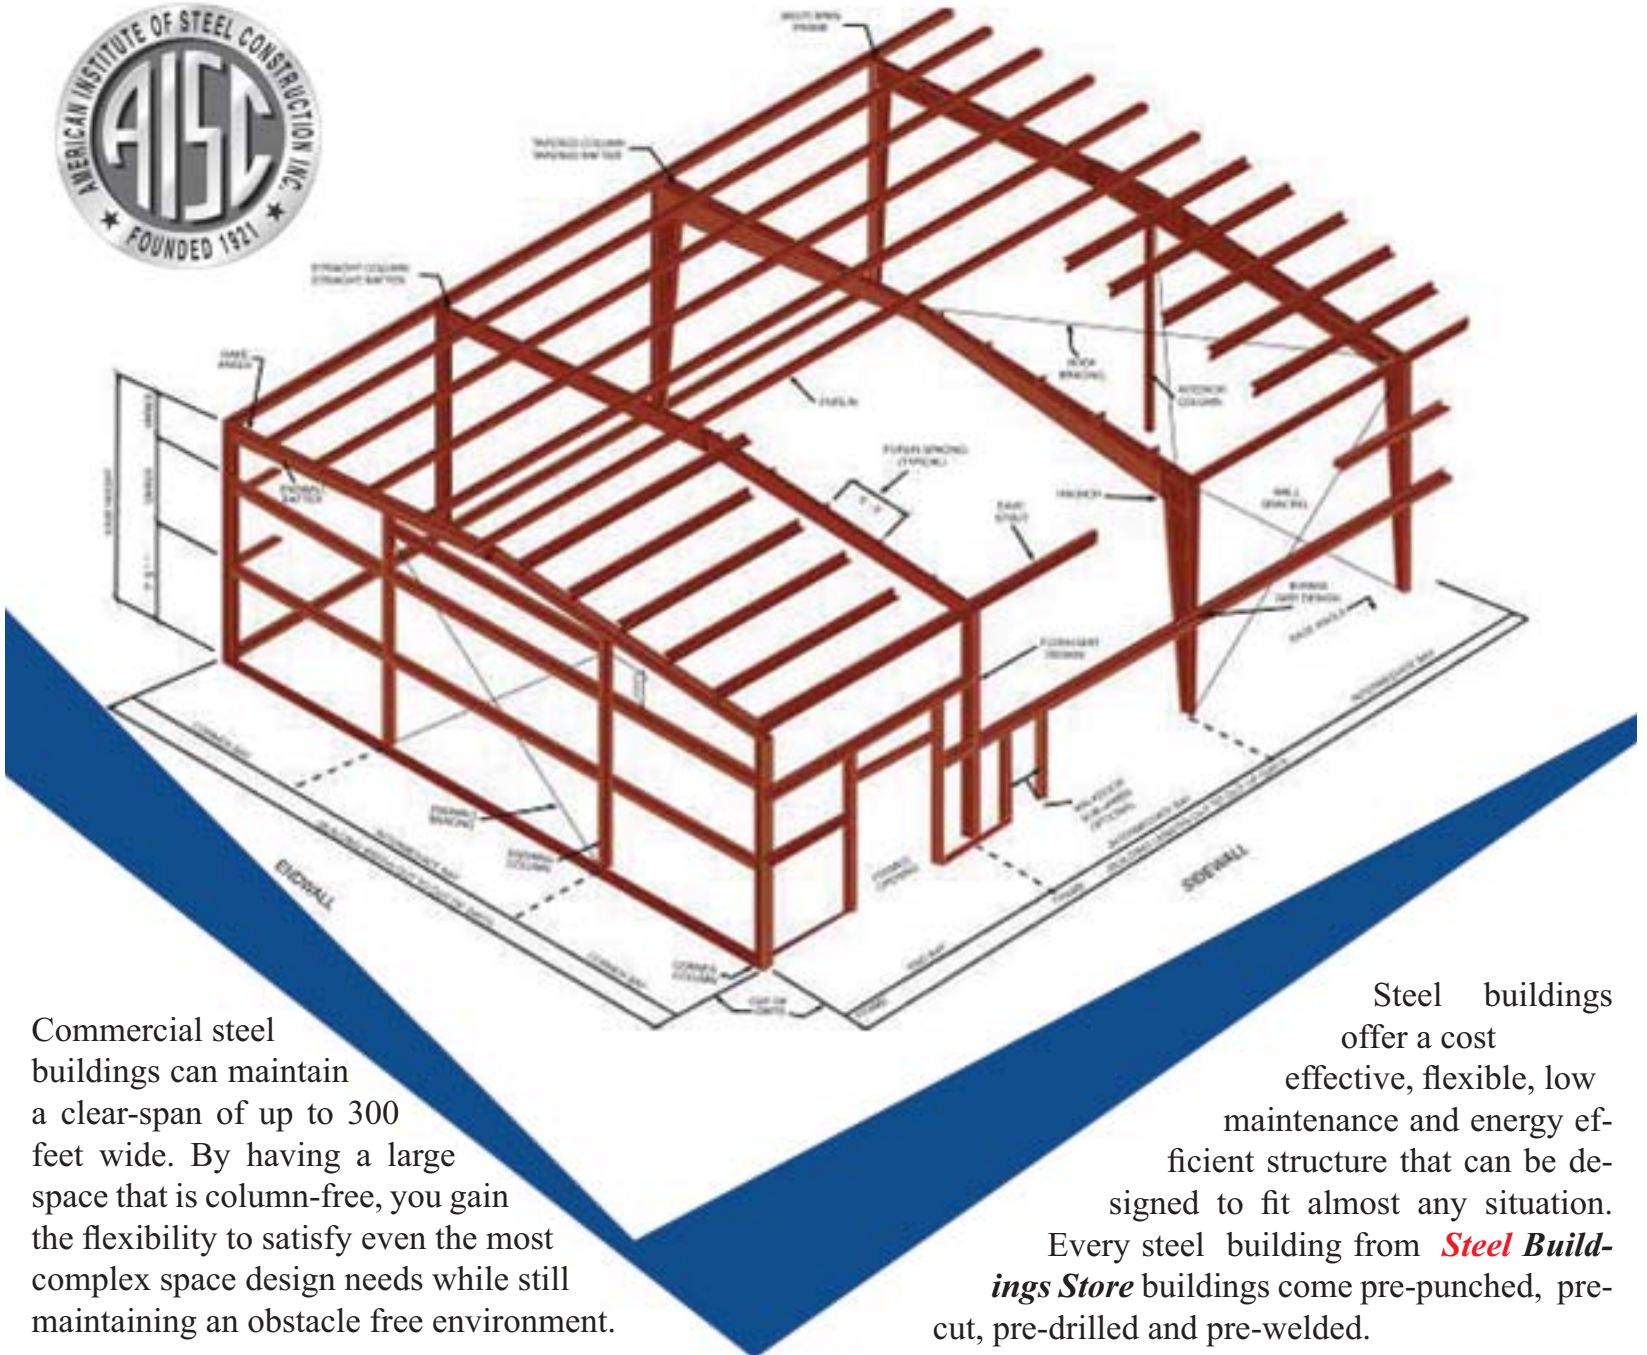

Cost

Steel Building Store prides itself in the fact that we always show our customers the best and least expensive way to accomplish their project.

If you are thinking of purchasing a new steel building, get in touch with us and we will do our part to ensure your project is a successful one!

FRAME DESIGNS

Commercial steel buildings can maintain a clear-span of up to 300 feet wide. By having a large space that is column-free, you gain the flexibility to satisfy even the most complex space design needs while still maintaining an obstacle free environment.

Steel Building Store buildings are engineer stamped and certified for your local building codes including snow, wind, seismic and exposure ratings. We customize all commercial steel buildings to fit the needs of our customers while providing them with a structure that is both efficient and flexible.

Steel Building Store buildings are easy to expand which gives you the ability to plan for the future without having to pay for it today.

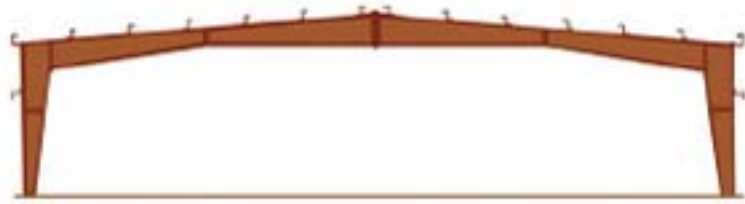

Steel buildings offer a cost effective, flexible, low maintenance and energy efficient structure that can be designed to fit almost any situation. Every steel building from *Steel Buildings Store* buildings come pre-punched, pre-cut, pre-drilled and pre-welded.

By using this steel building manufacturers process, it allows for the building to be erected in a fraction of the time. Steel is the least expensive material of all the available methods of construction.

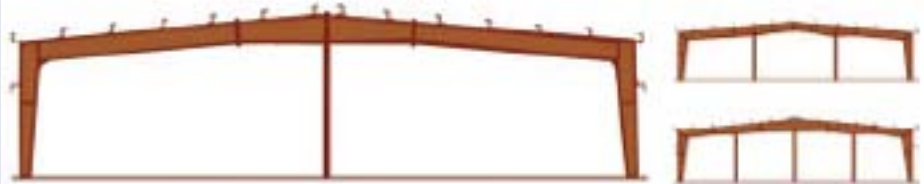

With low initial building cost and virtually no maintenance along with a 25 year limited warranty, it's easy to see why more people are turning to the *Steel Building Store*.

CLEAR SPAN

Tapered columns and rafters give optimum clear span capabilities while keeping unused interior clearances at a minimum.

**MULTI SPAN**

Offers the most economical cost per square foot for buildings over 80' wide. Ideal design when interior columns are not objectionable.

**CLASSIC**

Straight columns and rafters. This design is common on smaller width buildings. Easy to finish the interiors.

**HIGH SPAN**

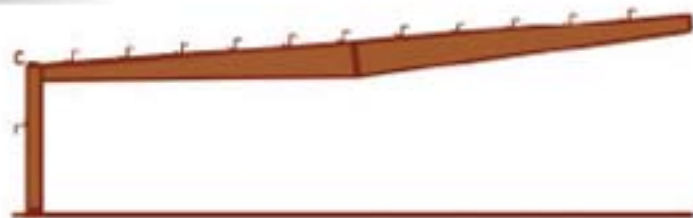

Gives the same design benefits as the Clear Span. Steeper pitch offers more interior height when required.

**SINGLE SLOPE**

Single slope, tapered columns. Especially suited for commercial stores. Offered with interior columns as well.

**LEAN-TO**

Used to add space at sides or ends. It differs from the single slope in that it must be supported on the high side by an adjoining building column.

**CUSTOM DESIGNS**

Special framing systems can be provided to meet unusual building requirements.
