Rapide: First Release Candidate of Applied Informatics' Integrated Development Environment for embedded Linux application development is available

AUSTRIA, February 26, 2007 - Applied Informatics Software Engineering GmbH (<http://www.appinf.com/>), the experts in software development tools for cross-platform development, announces the availability of Release Candidate 1 of Rapide. Rapide is Applied Informatics' integrated development environment (IDE) for embedded Linux application development under both Windows and Linux host systems.

Rapide is based on Eclipse CDT (C/C++ Development Tools) and comes with GCC based toolchains that support cross-compilation on both Windows or Linux hosts. The IDE also ships with a collection of C++ class libraries from the POCO open source project (<http://pocoproject.org/>), sponsored by Applied Informatics.

Additional Rapide features include:

- comfortable remote debugging
- automatic discovery of development boards connected via Ethernet (TCP/IP); no need to configure IP addresses manually --- plug-and-play development
- a variety of target tools: terminal, filesystem browser, editor, system viewer, process and thread viewer, etc.; all important development tools are readily available at your finger tips
- POCO C++ class libraries
- wizards for new project creation and the import of GNU Autoconf based Open Source projects
- a powerful cross-platform build system

A free CD evaluating Rapide++ is available by registering at <http://www.appinf.com/en/services/rapide.html>.
