Medscribbler™

"getting you there sooner!"

Scriptnetics

Mobility, power and flexibility

You work in a fast paced and mobile environment where documentation creation and retrieval needs to be as quick as you are and available where you are. Medscribbler is one EMR that can keep pace!
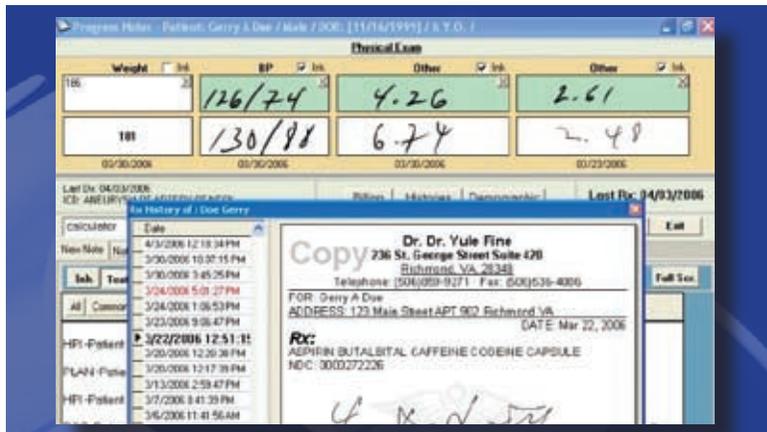

Scriptnetics designed an electronic medical record (EMR) that is recognized as the first of its kind. Built to maximize the use of handwriting on a Tablet PC, workflow is the same as paper – with the advantages of a computer!

With Medscribbler, your records remain in your control with your own client server set-up that allows remote access through your own virtual private network. The cost effectiveness of this model over others can add thousands of dollars per month to the bottom line.

Scriptnetics can train your on-site staff or local contractors to keep your patient information safe and secure. Even in the event of a total disaster of hurricane, wildfire or terrorism Medscribbler can be reloaded anywhere to be up and running within 15 minutes, even without the Internet or other communications.

Designed with the newest technology

In creating Medscribbler, Scriptnetics used the newest and best technologies. Designing for a physician's work flow was a given but adding "bleeding edge" computer technologies guarantees time savings that would just not be possible with old legacy technologies.

Handwriting, computer text, keyboard and even voice are combined logically to give top performance.

Medscribbler focuses on the speed of input to balance the need for speed with the need for "features". The solution mimics paper to make use intuitive but adds the features required to improve the quality of care without forcing you into the "point and click" box.

Key Benefits:

- Handwriting embedded into the EMR
- Designed for minimum workflow changes
- Ease of use to allow locum doctors
- "No busy signal" local system maintenance

Specific features include:

- One page histories summary and management including flagging and prioritizing lists.
- Multiple staff entry of information in real time with interoffice messaging to make the office a "team."
- Complete document management system to deal with paper mail, fax and external electronic transfers.
- "Set and forget" security to manage access down to the individual parts of a patient chart.

Taken together, with the speed of the pen, these features help you concentrate on the patient not the software, ensuring the most likely place for the increase in the quality of care comes from the most likely place, you the physician.

Easy-to-use interface

Medscribbler's interface is premised on the use of handwriting that can be saved into an electronic form making this EMR the easiest to use.

Routine functions can be performed the same as paper and pen. You still get to "write" a prescription or "write up" a progress note in the same way as your paper chart. This user familiar input method means an easy learning curve, lessened

> "Handwriting on the Tablet PC instead of on paper, that's the evolution of mobile documentation."

Patient charts, medical histories and contacts are now available faster. Anytime, anywhere!

implementation resistance and easier adaptation to the more powerful features.

With Medscribbler physicians quickly leave their EMR adoption anxieties behind and start setting up and using the more powerful features like "at home" access and personalized forms templates.

Built for speed architecture

All of the Medscribbler versions are designed to work as client server applications running on Microsoft Windows® products. This program architecture gives a "no bottleneck" guarantee allowing virtually no speed degradation no matter how busy it gets. Medscribbler installs locally to eliminate Internet dependency down times. Local installation does not mean only local use as the solution architecture gives remote access with virtual private network set-up through the Internet.

Purchase process that matters

The purchase of Medscribbler does not require a "leap of faith" or trusting in a someone else's "certification." Medscribbler's purchase process is designed to demonstrate trustworthiness.

Use Medscribbler's three step process.

- First, sign-up for a private interactive demo over the Internet on your own computer in the comfort of your own home.

- Second, move on to the next stage with the FREE Medscribbler Lite. Use the solution for a few patients or your whole practice – no time limit or additional features to buy. Enjoy FREE installation help and on-line training.

- The third and final step to an EMR solution, graduate to one of the purchase versions to expand the list of options available to customize the EMR to your practice, clinic or hospital.

Any step in the purchase process is your decision, no pressure, no hype only a desire to meet your needs as you describe them.
