

## About Coolexon

### What is Coolexon?

**Coolexon** is a powerful dictionary and translation software. By using **Coolexon**, simply click on a word by the mouse, **Coolexon** will display the translation and information of the selected word in a pop-up window.

About the terms displayed in the screen, **Coolexon** can recognize vocabularies in different languages and translate any word and phrase when users put the cursor on it. You can also listen to the pronunciation of the term being searched by clicking "Say It" button.

**Coolexon** can help customers in reading & writing and let those who are not fluent in foreign language feel easier when reading or composing foreign texts.

### What are the features of Coolexon?

- **Cross-translation over 60 languages**

**Coolexon** provides translation and dictionaries of over 60 languages in the world, supporting cross translation between different languages. These languages include  English,  French,  German,  Russian,  Spanish,  Italian,  Portuguese,  Dutch, Chinese ( Simplified/ traditional),  Japanese,  Korean and etc.

- **"Ctrl" key for the cursor translation and cross-translations between different languages.**

You can translate words in any places of the screen by using the cursor translation function of **Coolexon**. Simply pressing Ctrl key, the system will automatically recognize the words selected by the cursor and display results. Now the cursor translator supports  English,  French,  German,  Russian,  Spanish,  Chinese,  Japanese,  Korean, etc.

- **Full text translation over 15 languages**

The online translation service offered by **Coolexon** integrates the most advanced text translation engines in the world, including Systran, Prompt, Cross, Yahoo, Google and Altavista, etc, which makes text translation unbelievably easy. You can freely choose these engines for your translation and compare the different results generated by different engines to help you understand the texts in languages which you are not familiar with. The languages include  English,  French,  German,  Italian,  Russian,  Spanish,  Portuguese,  Dutch,  Greek,  Swedish, Chinese ( simplified), Chinese ( traditional),  Japanese,  Korean,  Arabic.....

- **Open management of dictionaries**

The open management makes you easily download and install dictionaries according to your own needs, furthermore you can freely configure their arrangements and themselves.

- **Words and Texts Pronunciation**

**Coolexon** provides the function of words and texts pronunciation based on the newest TTS audio pronunciations engine, which can help you quickly learn the pronunciations of the words and is very convenient for study and memorizing.

- **Downloads a huge amount of vocabulary bases for free**

We know the diverse demands of customers, therefore we provide hundreds of free professional dictionaries of various languages and disciplines for customers to download, and the quantity is increasing everyday.

- **The customer interface deliberately designed**

The customer interface is well-design and friendly and with its functions clearly displayed, which is very easy to use.

- **Convenient function**

The design of many convenient functions makes the application easily copy, paste, save, print and pronounce words or search results.

- **Small size but high efficiency**

Designed to be very small and smart software, **Coolexon** performs fast and occupies few system resources. Carefully designed dynamic compression makes its size only half to one tenth of the common dictionary format with the same content. The design that saves system resource and RAM can make it operate in all environments.

## System Requirements

Operating System: Windows 2000 / XP / 2003

Internet Explorer: version 6.0 or above

Copyright 2005-2007© Coolsoft (Sweden) AB. All Rights Reserved.

## Activation Wizard

The activation wizard will be activated when you start Coolexon for the first time.

**Coolexon Activation Wizard**

 **COOLEXON**

 **Activate Coolexon with the activation code**

- Your activation code is in the purchase confirmation email when making a purchase.

## Coolaxon Window

### Window Overview

### Main interface window

Coolaxon's main window has several functional areas:

**Toolbar:** contain controls for working with Coolaxon.

**Sidebar pane:** contain a list of active glossaries and frequently used functions, such as text translation, conversion utility or the dictionary lists

**Results pane:** display the information search results.

### Cursor Translation Window

Coolaxon's Cursor Translation Window contains two sections, the toolbar and the results pane.

The Top of the window is a toolbar that includes the functional buttons like "Search detailed explanation", "copy", "say it", etc. The bottom is results pane which displays the search results of the words the cursor put on currently.

The results can be displayed in multiple dictionaries, and the number of the displayed dictionary depends on the type and quantity of the activated glossaries in "cursor translator" of dictionary management.

## Toolbar

**Coolaxon** toolbar contains several buttons that perform common Windows operations. It also includes additional important indicators.

	<b>Always on top:</b>	Ensure the <b>Coolaxon</b> window always appears on top of all the windows.
	<b>Minimize:</b>	Minimize the <b>Coolaxon</b> window.
	<b>Maximize:</b>	Maximize the <b>Coolaxon</b> window.
	<b>Close:</b>	Exit the <b>Coolaxon</b> window.
	<b>Back:</b>	Return to the previous results window.
	<b>Forward:</b>	Display the next results window.
	<b>Term box:</b>	Field for displaying and entering the term or value.
	<b>Search:</b>	Initiate a search for the term displayed in the term box.
	<b>Menu:</b>	Open the <b>Coolaxon</b> Menu.

	<b>Hide/Display sidebar panel"</b>	Control the display of sidebar panel.
	<b>Say It :</b>	Pronounce the term displayed in the term box using the currently configured Text-to-speech engine.
	<b>Copy:</b>	Copy the entire contents of the term box, and copy certain part of results box which is selected.
	<b>Save:</b>	Save the search results as .htm file and the term name is the default file name.
	<b>Print:</b>	Print the current search results.
	<b>Find:</b>	Search key words/terms in the current search results.
	<b>Full Text Translation:</b>	Go to full text translation page (Internet connection required)
	<b>Latest Updated Content:</b>	Display dictionary libs and software update information (updated contents need Internet connection)

## Term Box

### Using the Term Box

Firstly open the Coolexon window and then type or paste the word or text directly in the term box. Press the **Enter** key or click the **Go** button on the toolbar to begin the search.

## Index Group Dictionaries

The dictionary icon on the left of the term box is the index dictionary currently using.

If the icon is magnifying, it represents that the current index dictionary is arranged automatically on the top of the index group list.

Please refer to "adjusting dictionaries arrangement" as regard to index dictionary priority in sequencing.

## Browsing Terms Previously Translated

Coolaxon stores the last 20 terms entered in the Term box. (At most 100 terms can be stored) You can view previous results by clicking the arrow on the left of the term box and scrolling through the Term box's pull down list. Alternately, you can use the Back and Forward buttons in the toolbar to scroll through the history list.

The history of results can be cleared via the General tab in the Configuration dialog box.

## Results Pane

The Results pane displays all the results for the selected word or text.

## Sidebar Panel

### Sidebar Pane Overview

The left side of sidebar pane displays two buttons – Index and Guide.

The index provides a list of terms through certain regulation, while Guide provides a list of all the dictionaries which provides search results, dictionary manager and options for activating various functions.

## Index

Index bar displays all the terms listed in the top dictionary of index group dictionaries. Index bar will display all the terms in the selected dictionary when you select an index dictionary on the left of term box.

Terms of index column are alphabetized, while non-Latin dictionaries are arranged by specific regulation. For more details please refer to dictionary details.

## Guide

## Result

The top section of the sidebar displays the list of dictionaries currently showing results. Clicking on a dictionary title in the sidebar brings you directly to the result from that specific title.

## Actions

The middle section of the sidebar provides frequently used actions:

**Web Search:** Searches for the current term using the search engine defined in the Configuration dialog box, this opens the default search engine in your web browser.

**Text Translation:** translates a text into targeted language.

## Options

The bottom section of the sidebar provides links to configuration and help function:

**Dictionaries:** Open Manage Dictionary dialog box

**Configuration:** Open the Configuration dialog box.

**Coolaxon community:** Open Coolaxon official website <http://www.secoolsoft.com>

This document was created by an unregistered ChmMagic, please go to <http://www.bisenter.com> to register it. Thanks

Copyright 2005-2007© Coolsoft (Sweden) AB. All Rights Reserved.

## Start Using

### Result section menu

The result section displays all translation and dictionaries results for the requested word or text.

The text in the results area can be selected using the mouse as in any Windows application, using the right click option.

To perform actions on selected text, first select the text, and then right-click to open the Results menu.

The menu has the following options:

**Search:** put the cursor on the word/term then click this option to begin a search. If you first select a phrase or a word, then click this option to begin a search for the text.

**Copy:** Copy the selected text to the clipboard. The text can then be pasted into any other application. If no text is selected, this option is disabled. If any images are selected along with the text, the images are also copied.

**Say It:** Pronounce the selected text using the configured Text-to-speech (TTS) engine. If no text is selected, this option is disabled.

**Find:** search key words/terms in the current term explanations, similar to the corresponding function of notepad in operation system.

**Save:** save the contents of the results pane as a HTML file, and the current term is the default document name.

**Print:** Print the current search results.

**Select All:** Select all the text, pictures and formats in the results pane.

### Dictionary / Title Menu

When you click on the dictionary name in the Results pane, the Dictionary menu opens.

**About:** Display a description of the dictionary title, such as author, description and version.

**Disable:** Disable the specified title. A disabled dictionary will not return results until it is enabled again from the dictionaries dialog box.

**Set as top result** Move the title to the top of the dictionaries installation list.

**Arrange results:** Open the “Installed Dictionaries” in Dictionaries dialog box.

## Full Text Translation

Coolaxon offers the function of full text translation. Simply click the mouse you can get the 15 main languages in the world translated.

Open the main interface of Coolaxon and enter the “guide” tab in the side bar to click “text translation”, or directly click the button of “text translation”, then the full translation will be displayed in the result section.

You only need to directly type or paste the text for translation, then select a translation engine, source language and target language and click the button of translation, soon the translation results will be displayed. Coolaxon remembers the last selection.

Text translation service needs online support. Please check web connection if no results are displayed within a long period of time.

## The cursor Translator

Coolaxon also provides the convenient cursor translator.

Once put the cursor on the beginning of a word /term, the search window of cursor translator will promptly open according to the cursor translation mode under the “translate” tab of Configuration dialog box, meanwhile displaying its search results.

Coolaxon can provide explanations of different languages. With relevant the installation of corresponding dictionaries, the software will be able to recognize whether the term is Chinese, English, French, German, Spanish, Korean or Japanese and provide corresponding explanations.

## Clipboard Translation

Coolaxon also provides the function of clipboard translation.

Coolaxon will perform a dictionary search on a text and display the matching explanations after it is copied and pasted onto the clipboard. For some long sentences and the terms which are not contained in the dictionaries you can click "text translation" or "web search" to perform accurate translation or search.

This function can help with translation for some applications which have no function of cursor translation or can not correctly perform cursor translation (e.g., PDF reader or some applications based on JAVA).

## Web Search

Firstly open the Coolaxon window and then type or paste the word or text directly in the term box. Press the **Enter** key or click the **Go** button on the toolbar to begin the search.

## Index Group Dictionaries

If Internet connection is available, you can perform an Internet search for a term in the term box by clicking the Web Search option in the sidebar. This opens the default search engine in your web browser, and automatically performs a search by the search engine configured in Coolaxon.

The default search engine can be defined in the Configuration dialog box, under the General tab.

## Pronunciation of Terms

Coolaxon has a Say It feature that lets you hear the pronunciation of words and phrases. This option requires a sound card and speakers or headset.

By default, Coolaxon uses the English text-to-speech (TTS) engine installed with the operating system. To hear pronunciation of words in other languages, you must download and install additional text-to-speech engines.

Say It needs the support of text-to-speech (TTS) engine base. You can download and install it from official website if TTS engine is not available in the operating system. When downloading, you can choose to install either a male or female voice.

The Say It settings can be changed from the Configuration dialog box, under the Speech tab.

Coolaxon can distinguish different languages, and pronounce the words in the corresponding language. This function needs to select the "auto march the most similar voice according to the language types" in Configuration dialog box, under the Speech bar.

To hear the pronunciation of words in the Term box, click the Say It icon  on the small toolbar on the top of the Results pane.

To hear the pronunciation of words or phrases within the Results pane, choose text with the mouse, right-click to open the menu, and select Say It.

## Working with Dictionaries

### What is dictionary?

Coolaxon consists of two independent sections: software and dictionary. Software is a huge shelf and dictionaries are just like books in the shelf.

Software is responsible for performing dictionary settings, search and translation while dictionary is responsible for the storage and classification.

### Install dictionary

There are two ways for installing dictionaries. Customer could directly download the dictionary files from Coolaxon website <http://www.secoolsoft.com> , and then double-click the selected file, the dictionary will be installed automatically.

You can also open the dialog box of the dictionary, click the installation button and select a file to install.

### Uninstall Dictionaries

If you decide to remove one dictionary, firstly select it from "Installed Dictionaries", and then click "Uninstall" and the dictionary will be completely removed from the software

And the dictionary will be also removed from Index Group and Cursor Translator Group simultaneously.

### Dictionaries Group

## What is Dictionaries Group?

In Coolexon, dictionaries are assigned to different groups based on different use, such as Term Group, Index Group and the Cursor Translator Group.

Term group uses all the installed dictionaries of Coolexon by default. Index Group and the Cursor Translator Group need to install the dictionary, if they want to use it.

## Adding dictionaries

Open the Dictionaries dialog box and click Install Dictionary, , you will find all the installed dictionaries.

There are two options named "Index Group" and "Cursor Translator Group" in the Dictionaries dialog box.

The active dictionaries in Index group control the dictionaries for "index" in the sidebar pane,

and the active dictionaries in the Cursor Translation Group determine the quantity of dictionary when users start the Cursor Translation mode.

To add dictionaries into the Index Group and the Cursor Translation Group, firstly clicks the "Add" button, a window which contains a list of the installed dictionaries will popup, with the dictionaries new added displaying in shadow. Then you only need to select other dictionaries you need and click the "Add" to add.

## Remove dictionaries

If you want to remove dictionaries in the Index Group and the Cursor Translator Group, you can click the "Remove" to delete it from the list.

## Manage Dictionaries

### Activating dictionaries

Installed dictionaries in the dictionaries group have two states: activated and banned.

Simply select a dictionary to activate it.

A dictionary added to Coolexon is activated by default.

### Disable dictionaries

You can cancel the ticks in the corresponding groups to temporarily disable the dictionary.

Users can use the "disable" button in the results pane menu to disable the dictionary.

The dictionary is still in the installed state through it won't be displayed in the search results.

### Adjusting order of dictionaries

Coolexon displays search results according to the order of "Installed Dictionaries" in the Dictionary dialog box. Use the Move Up/Move Down buttons to change the order.

Please click the dictionary name in the dialog box if you want to see its explanation of a term first, and then click the Move Up button and move it to the top.

You can also click the dictionary name in the results pane of the main window interface then select "Set as top result" in pull-down menu.

### Check Dictionary Details

**Dictionary Details** shows a description of the title. Details include the dictionary's title, version, description, author, email, website, copyright, total words, creation date and last updated.

## Coolexon Configuration

Coolexon can be customized for various operating environments and user preferences. The Configuration dialog box has 5 tabs for defining these settings:

**General:** general settings for Coolexon

**Appearance:** configurate the display of the Coolexon window and results and cursor translation style

**Translate:** configurate the cursor translation mode and time delay.

**Speech:** configurate the text-to-speech settings.

**Connection:** configurate how you connect to Coolexon's Internet server and get software online updates.

## General Settings

**User interface languages:** Allow you to select user interface languages displayed in drop-down list. The default language is the selected language when installing.

**Web Search:** let you select the search engine for searching the web.

**Term History:** set the number of the searched term to save in term history and clear the term history.

**Startup:** select this option, the application will automatically start up when start computer, which is very convenient for the user who often use Coolexon.

**Minimize:** select this option, the main interface window will automatically display in the taskbar after starting Coolexon.

## Appearance

**Search results display:** the box provides configurations of "text font", "font size" and "phonetic font". Users can select and adjust them according to their own preferences. For "phonetic font", we recommend you to apply default setting.

**Cursor Translator Window:** contain configuration of "Font Color", "background Color" and "Border Color" and have the preview on the right.

## Translate

Here provide the configuration of cursor translation modes, "Mouse-On", "Shift + Mouse", "Ctrl + Mouse" and "Middle Mouse Button". The default configuration is "Ctrl + Mouse" and users can select one according to their habits.

The cursor's default time delay is 300 milliseconds.

## Speech

The text-to-speech (TTS) engine provides four options to adjust.

Voice: select the engine you like in the drop-down list. Coolexon will automatically matches the most similar voice according to language type of the text if you select "automatic match".

Volume: there are 21 levels to control the volume, the left is low volume and the right is high volume.

Pitch: there are 11 levels to control the tone, the left is low pitch and the right is high pitch.

Speed: there are 11 levels to control voice speed, the left is slow speed and the right is high speed.

## Connection

### Network Connection

Auto check proxy settings - select this option, the software will perform checks internet connection according to the configuration of operation system.

**Connect through Proxy/Firewall server:** select this option, you should firstly input the IP address and port of specified **Proxy server**, and then Coolexon will perform internet connection according to specified preferences.

### Online Updates

Starting up online updates - select this option, Coolexon can update without manual check by users.

Update Now - clicking this button to check Coolexon's new version or contents for update.

### Hot Keys

Open the main window – close or open the main window interface of the application, the default value is Alt + L;

Cursor translation button- close or open the cursor translator, the default value is Alt + G;

Say it- speeches the current or selected term, the default value is Alt + G;

Copy explanation- copy all the contents in the results section of the main window, the default value is Alt + I.

## The Coolexon Menu

The Coolexon menu provides access to customization options of frequently used functions. The menu can be opened by clicking the Coolexon icon on the taskbar or the Menu button on the right of the search button.

**Open:** Open the Results window.

**Cursor Translator:** open/close the cursor translation.

**Dictionaries:** Open the Dictionaries dialog box.

**Configuration:** Open the Coolexon's configuration dialog box.

**Help:** Launch Help file or open Help file by pressing F1 key when software window is on the top.

**Online support:** opens website browser to enter the supporting page of Coolexon official web site <http://www.secoolsoft.com/faq.htm> .

**About Coolexon:** display the current version, authorization and copyright information of Coolexon.

**Exit:** Close Coolexon. Coolexon can be restarted by running shortcut or Coolexon.exe.
