

PRESS RELEASE

ESNATECH AND IWATSU VOICE NETWORKS INTRODUCE UNIFIED COMMUNICATIONS FOR THE SMB MARKETPLACE WITH THEIR NEW IWATSU ENTERPRISE COMMUNICATION SUITE

New Unified Communications platform for SMB marketplace will change the way small and medium size businesses communicate with the unification of mobility, presence and messaging in a consolidated communications platform.

Richmond Hill, ON, Canada and Irving, TX USA March 20, 2007—Esna Technologies Inc. (Esnatech) & Iwatsu Voice Networks (IVN) today announced they have merged Esna's Telephony office-LinX Unified communications solution with the ECS IP telephony Platform from Iwatsu to deliver the new Enterprise Communication Suite for small and medium size companies. The new Enterprise Communication Suite provides the unification of telephony, mobility, messaging, and enterprise presence to allow SMB companies to cost effectively change the way they communicate from latent "inbox" response to proactive real time live communications.

A leading provider of unified communications solutions, Esnatech has long been a leader in IP integrations. The company will be expanding its complete product portfolio compatibility with the market leading and most advanced IP communications systems by focusing on SIP (Session Initiation Protocol), a leading IETF signaling protocol for voice over IP (VoIP) solutions. Iwatsu Voice Networks is a global leader in IP voice communications with its market leading Enterprise Communications Server telephony solution that delivers QuadFusion technology to its customers by providing integration of four (4) different communication protocols into one integrated solution. ECS has dynamic support for SIP, H.323, TDM, & VoIP in one platform.

The merger of the Enterprise communication suite allows Iwatsu and Esnatech to be the first enterprise telephony provider to seamlessly integrate a unified communication suite as part of its core telephony offering. Don Gant, VP Marketing for IVN says "we deliver tremendous value for organizations from 25 to 500 users and can seamlessly work with any email/group ware environment as well as integrate any wireless device into the IP telephony infrastructure".

The merger of these products through SIP integration reduces the cost of hardware, provides flexibility in terms of deployment location and remote site support, as well as support for high availability and resiliency initiatives. "SIP is a very important protocol for IP telephony, video, instant messaging and presence. It is the ideal protocol for Esnatech/Iwatsu to leverage their collective future development for unified communications solutions like the enterprise communication suite" said 'Esnatech's CEO/CTO, Mohammad Nezarati. "The enterprise communication suite will allow us to provide seamless integration into different business applications and deliver real time availability of content from any access point to our customers."
