

MXSweep

Email Protection

The MXSweep email protection service provides accurate protection from email threats, including spam and fraud scams, viruses and attacks on servers or networks. The service is available to organisations of all sizes, including small businesses with a couple of users, up to large corporate and government departments with 100s of thousands of users.

Applying multiple layers of protection, the MXSweep email protection service provides the comprehensive protection required to purify business email from threats.

Why MXSweep Email Protection?

- Protect your network and servers from attackers.
- Protected within an hour of requesting a trial
- Protect employees from inappropriate content
- Best of breed technology
- No administration required

Utilising best of breed technologies, the MXSweep service integrates multiple layers of protection. Customers can benefit from world leading vendors, backed up by MXSweep technology in a secure hosted environment enjoying 100% uptime, zero overheads, and protection within the hour.

About MXSweep

MXSweep is a leading provider of Managed Security Services. Our Preemptive Email Security Service shields customers from online attacks before they impact business assets. We filter out SPAM, Viruses, Offensive Content, and Fraudulent Email before it can reach your network. MXSweep has been awarded the Anti-spam Premium Checkmark Certification.

Leveraging a network of secure data centres we make best-of-breed email security affordable. Whether your business has 5 users or 50,000 users, we provide you with the best protection available. What's more, we provide it on a pay-as-you-go basis, so your capital expenditure budget remains untouched.

Email Protection

MXSweep

How it Works

The MXSweep e-mail protection service acts as a complete defensive barrier, protecting your email server and mailbox from threats. All email is passed through multiple threat detection engines including spam, virus, and fraudulent scam detection engines. Threats are safely quarantined, and good email is relayed onto your email server. The entire process takes less than one second, and you receive only good email.

Benefits

- ✓ No hardware or software.
- ✓ 99.9% spam detection
- ✓ Protection from 100% of viruses
- ✓ Redundant infrastructure across multiple data centres
- ✓ Free up I.T. time
- ✓ Free employee inboxes from Clutter
- ✓ No capital expenditure
- ✓ Reduce costs of Bandwidth

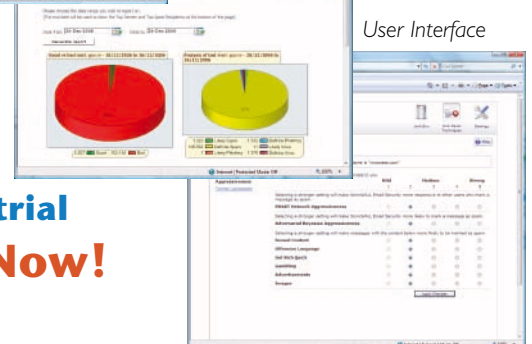

Key Features

- ✓ Combination of Multiple commercial graded spam detection engines.
