**Breast cancer has long been a major area of concern for CANCERCare**, as approximately one quarter of its client base consists of breast cancer patients. As the founding sponsor of National Breast Cancer Awareness Month 20 years ago, the organization has advocated for greater access to breast health education, information, screenings, and other support services.

CANCERCare has helped bring national attention to the importance of early detection, especially for African American, Hispanic and other medically underserved women – including those who are elderly, low-income, and under/uninsured. [www.CANCERcare.org](http://www.CANCERcare.org)
