

# DIGITAL FUEL MIZER®

Patent Pending DRIVE SMARTER

**Compatible with all  
vehicles and fuel types:  
Gasoline, Diesel, Hybrids.  
SUV's, Trucks, Passenger Cars,  
Commercial Vehicles**

**1. Easy Mounting**— with included mounting strip. Mounts on ceiling, dash, console, steering column, or any other fixed surface. No wiring, no drilling, no hassle.

**2. Switch It On**— Self contained long life battery, so there is no wiring required.

**3. Look and Listen**— You will hear a gentle alert if you begin to accelerate or brake too harshly. If your vehicle is operated inefficiently, you will hear the alert, and see the rising light bar.

**4. Let Off**— To minimize fuel waste, simply let off of the gas pedal slightly until the alert tone slows and stops. Do the same for braking. **Of course, you can still accelerate or brake as much as you need to for safety**, but you will be reminded by the Digital Fuel Mizer that your vehicle is operating inefficiently.

**3 YEAR WARRANTY  
SATISFACTION GUARANTEED**

**\$249 INTRODUCTORY SPECIAL**

**DIRECTLY FROM THE MANUFACTURER**

**Advanced  
Micro-Technology Inside:**

### **Features:**

- **Solid State**— Advanced electronics for long life and precision.
- **Precision**- MEMS accelerometer for accuracy.
- **Sensitivity**— More sensitive than the best driver.
- **Durable**— Rugged housing of 6061 aluminum billet.
- **Self Contained**- Long life battery, no wiring needed.
- **Easy Installation**— Easily attach to dash, ceiling, or console.
- **Driver Safety**— Alerts with audible tone and visual light bar.

**The Digital Fuel Mizer reduces fuel consumption** by providing the driver with an accurate way to monitor acceleration and braking forces.

**When the vehicle is operated inefficiently**, it alerts the driver with a series of tones that vary in pitch and frequency.

**If the driver is accelerating a little too hard**, they will hear a gentle alert tone, and see a rising light bar. Hard acceleration will be alerted with a faster tone. Likewise, inefficient braking will be alerted with a lower tone that varies with braking intensity.

**Without even looking at the instrument**, the driver will recognize fuel wasting driving conditions, and will be able to adjust their driving accordingly.
