

ULTRASYNCTM PORTABLE

Synchronization Simplified.

USB Flash Drives: How did we ever live without them? USB flash drives have become indispensable tools for most of us and large capacity devices allow us to store more and more of our digital content on these wonderfully portable drives. But how do we organize, manage and make use of content from several different PCs all within a single flash drive? The solution is simple - UltraSync Portable.

Take it with you. imagine LAN's UltraSync Portable simplifies the process of transferring your important digital content from your PC (or PCs) to your USB flash drive.

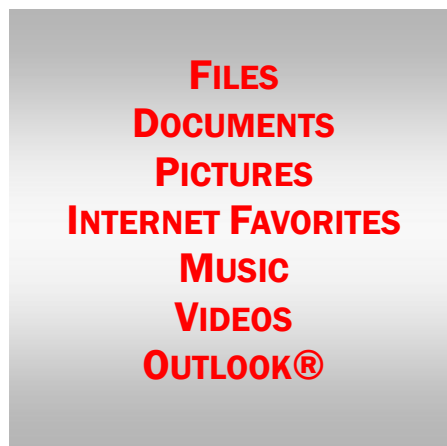

UltraSync Portable allows you to create a content profile for each of your PCs so you can easily synchronize your files, documents, pictures, music, videos, Internet favorites and Outlook email with your flash drive.

Your own portable Outlook. UltraSync Portable doesn't just sync, it allows you to use Outlook on a guest PC as if it were your own - by temporarily injecting your Outlook profile into an Outlook session launched by UltraSync Portable. And when your session is over, no traces of your Outlook activities are left behind on the guest PC.

Your own Internet favorites. When you launch an Internet browser from UltraSync Portable your synced Internet favorites are also injected for your use on a guest PC.

Sync it when you get back. It's that easy. Connect your USB flash drive to any of the PCs you've previously synced with and it will automatically sync the appropriate content (files, docs, pictures, favorites, music, videos and Outlook) with that PC.

Use it while you're away. UltraSync Portable's unique Device Desktop feature provides you with an easy way to navigate to and use the digital content you've synced to your flash drive. And if you sync content from multiple PCs, the Device Desktop automatically organizes the content by source PC and user.

OPERATING SYSTEMS
 UltraSync Portable is compatible with Windows Vista and Windows XP operating systems.

OUTLOOK SUPPORT
 UltraSync Portable supports Outlook 2003 and Outlook 2007 PST file sync, and portable Outlook on guest PCs.

HARDWARE PLATFORMS
 UltraSync Portable installs to and runs from any USB removable drive.
