Confio Software Introduces
Confio Ignite for Sybase

Confio Software Brings New Multiplatform Database Performance Management
Tools to the Sybase User Community

Las Vegas, NV and Boulder, CO — August 7, 2007 – Confio Software, the leader in wait-time application performance management tools, today announced the immediate availability of Confio Ignite™ for Sybase. On display this week at TechWave 2007, the Sybase User Training and Solutions Conference, Confio's solution provides increased visibility into the cause of performance problems that can occur in a Sybase environment. Confio Software's comprehensive Igniter Suite™ now covers multiple Oracle, Microsoft, IBM and Sybase databases to address approximately 90% of the RDBMS market.

Confio Ignite for Sybase improves how enterprises monitor, analyze and optimize their Sybase databases and applications. Designed for database administrators (DBAs) responsible for business critical systems and solutions, Confio's latest product gives DBAs and expanded range of platforms where they can utilize best-practice performance management. The product is tailored for Sybase installations and allows DBAs to instantly highlight the most important database problems, their root cause and resolution.

"Ignite for Sybase introduces best practice wait-time methods into the Sybase environment, allowing DBAs to eliminate costly delays at the database layer that can impede critical application performance," stated Don Bergal, chief operating officer, Confio Software. "Sybase has a rich history of being a high performance database, especially for demanding industries such as financial services and insurance. Confio Ignite for Sybase ensures that companies are always operating at peak performance and achieving expected service levels."

Organizations with mixed database environments now have a single monitoring architecture to cover multiple systems. The new product is dedicated to giving the Sybase user community a fast-to-results tool and best practice methodology that has mostly been unavailable to the Sybase market. Highlights of the new product include:

- Common repository for capturing data from Sybase, Oracle, SQL Server and DB2
- Single desktop client for DBAs, developers, and managers to monitor all database types
- Monitors any application that is depending on information from Sybase databases, such as .NET, Java and client server applications.

Built on industry best-practice Wait-Time methods, Confio Ignite uses a patented agent-less architecture that identifies the exact command and database process causing delays without draining performance. Confio Ignite measures end-user wait-time with detailed granularity and gives IT management a clear direction of who should own the performance problem. For DBAs, the product identifies the exact modules and screens that affect database performance and prescribes the best path towards resolution.

More about Confio Software's leading multiplatform wait-time application performance management tools can be found at www.confio.com or by stopping by the Confio Software booth, #207. In addition, free trials of Confio Software are

available for download at http://www.confio.com/freetrial. Within 30 minutes customers can download, install and begin identifying a path to improving application performance and service levels.

About Confio Software
Confio Software develops Oracle, SQL Server, DB2, Sybase & Java application performance management tools that are revolutionizing how databases and the applications that depend on them are monitored, managed and optimized. Built on industry best-practice Wait-Time methods, Confio Igniter Suite improves service levels and reduces costs for database and application infrastructure. Confio is based in Boulder, Colorado, with customers worldwide. For more information see Confio.com.
