Allianz Insurance JSC Deploys Zecurion's Zlock
To Control User Access to Peripheral Devices on the Corporate Network

NEW YORK, NY, August 30, 2007 – Zecurion, Inc. today announced that Allianz Insurance JSC, a leading insurance and asset management company, has deployed its Zlock software to control access to peripheral devices on its corporate network and standalone computers. Zlock was selected after a thorough market research for its reliability, flexibility and ease of use, as well as the ability to monitor the client workstations for illicit activities, which provides the IT department with an additional layer of confidence.

Being one of the leaders in the financial services market, Allianz is striving to protect its assets – information about clients and their financial operations; data security being a major objective not only for the IT department, but for the entire company. Allianz carefully searched the market for a system that would prevent information leakage through portable memory devices, printers, etc., and selected Zlock for its strength, flexibility, ease of deployment and more than adequate support.

"We extensively evaluated corporate information security systems, looking for strength and reliability, flexibility, ease of deployment and use, and quality of support. Zlock performed the best of all, besides, it adds one important functionality: fast processing of user requests for access policy changes, which helps to precisely balance our security and business requirements", said Michael Hergesell, CEO of Allianz Insurance JSC. "Another important advantage of Zlock is the ability to monitor client workstations for illicit activities, which helps to considerably strengthen our network security".

"The deployment was performed by the IT specialists from Allianz", commented Alexey Raevsky, CEO of Zecurion, "while our team was providing basic support, suggesting the best ways to tailor Zlock to the business processes and IT infrastructure of the company".

After successful teamwork on deployment, Allianz added Zlock to its list of preferred and recommended security solutions, as it is especially well tailored to control access to peripheral devices and computer ports in the large corporate networks.

About Zecurion

Zecurion, Inc. is an expert in protection of corporate information from internal threats, emphasizing reliable and transparent server storage/backup security, and control of peripheral devices in corporate networks with clear, easy-to-use administrative interfaces and tools.

Leveraging over 10 years experience in developing encryption-based security solutions, Zecurion allows to efficiently protect corporate information from internal threats, as well as from loss or theft of backup storage media with Zlock and Zserver Suite software products.
